START / RUN CAPACITOR, HOW TO at InspectApedia.com**

General information

Electrical specifications and definitions

Rated voltage Vn

The rms value of the sinusoidal AC voltage which can be applied to the capacitor in normal working conditions.

Rated current In

The value of the current flowing through the capacitor of rated capacitance at the rated voltage and frequency.

Duty frequency range

The capacitors can be used at a frequency range of 50-60Hz. Use at higher frequencies is possible provided the voltage, current, temperature and power limits are complied with.

Operating temperature class

Minimum temperature -25°C.

Maximum temperature +70°C or +85°C.

In accordance with the reference standards, these temperatures are those measured on the surface of the capacitor.

Storage temperature

-40°... + 85°C

Capacitance tolerance

Rated tolerance $\pm 5\%$

Different tolerance values are available on request.

Loss angle tanδ

The value of the tangent of the loss factor measured at 50 Hz, 20°C at the rated voltage is:

$$\tan\delta \leq 20 \cdot 10^{-4}$$

Maximum permissible overloads

The capacitors can operate in the following overload conditions throughout the temperature class range:

$$I_{max} = 1.3 \cdot I_n$$

$$V_{max} = 1.1 \cdot V_n$$

The overload deriving from the simultaneous presence of voltage and current above the rated values, even if within the stated limits, must be such that the apparent power P_a ($I_{rms} \times V_{rms}$) absorbed by the capacitor is:

$$P_a \leq 1.35 \cdot 2\pi f C V_n^2$$

Pulsed stress

The capacitors are capable of withstanding steep wavefronts with a maximum voltage variation speed of 20 V / μ s.

Insulation resistance between terminals and case

Measured at 500 Vdc, 20°C after 30 seconds.

$$R_i > 1000 \text{ Mohm}$$

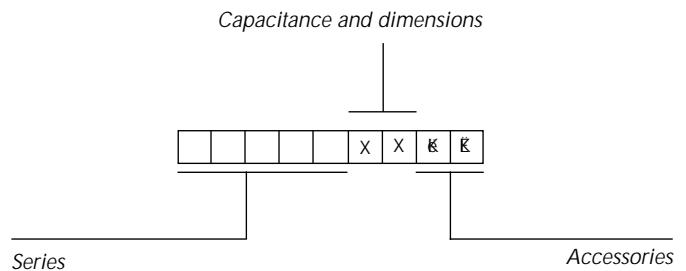

Direct current operation

These capacitors can be used with a DC voltage not exceeding the peak value of the rated voltage.

$$V_{dc} \leq \sqrt{2} V_n$$

Capacitors for higher DC voltages are available on request.

Part number composition

Mechanical specifications

Mounting:

The capacitors may be provided with stud M8 and M12 for mounting:

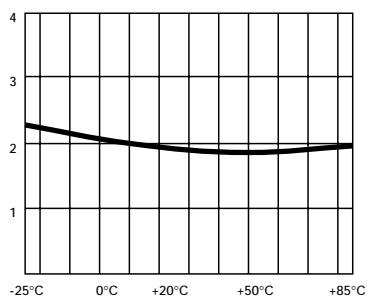

The maximum torque is:
5 Nm for M8
12 Nm for M12

Vibrations:

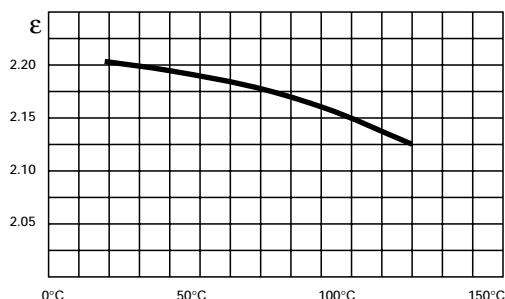

In accordance with IEC 68-2-6 standards, the capacitors pass the test with a frequency range from 10 to 55 Hz, acceleration amplitude 10 g and duration 6 h.

Typical performance of electrical characteristics of metallized polypropylene film vs. temperature

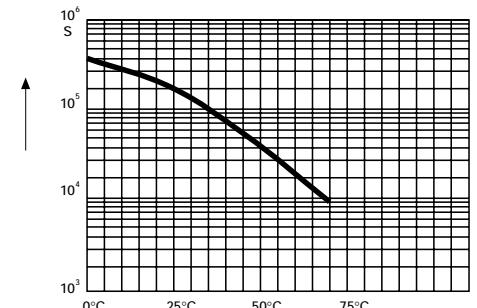

Dissipation factor

Dielectric constant

Insulation resistance

Protection degrees according to IEC publication 529 (IPXY)

1st code letter X	Protection degree
0	Not protected
1	Protected against solid objects greater than 50 mm
2	Protected against solid objects greater than 12 mm
3	Protected against solid objects greater than 2.5 mm
4	Protected against solid objects greater than 1.0 mm
5	Dust-protected

2nd code letter Y	Protection degree
0	Not protected
1	Protected against dripping water
2	Protected against dripping water when tilted up to 15°
3	Protected against spraying water
4	Protected against splashing water
5	Protected against water jets

Operating classes (DIN 40040)

According to DIN 40040 (ed. Feb. 1973), operating classes are identified by 5 letters which are defined consecutively: lower temperature, upper temperature, relative humidity, expected life, failure rate.

1 2 3 4 5	Temperature lower limit (°C)
1st letter	
F	-55
G	-40
H	-25
J	-10

1 2 3 4 5	Temperature upper limit (°C)
2nd letter	
M	+100
P	+85
S	+70
U	+60

1 2 3 4 5	Relative humidity (%)		Acceptable condensation
3rd letter	I Maximum value	Year average	
F (1)	95 (2)	≤75	no

1 2 3 4 5	Expected life (3) (ore/hours)	Failure % max
4th and 5th letter		
QV	1.000	
PU	3.000	
NT	10.000	3
MS	30.000	

(1) Room temperature = 35° C;

(2) For 30 days/year max; then max RH = 85%;

(3) On rated service and at upper temperature limit.

Operating classes and climatic categories IEC/EN 60252

Operating classes of capacitors for single phase motors are identified as follows:

a) Life expectancy

	30.000 h class A	10.000 h class B	3.000 h class C	1.000 h class D
failure % max	3%	3%	3%	3%

b) Climatic category

25	/	85	/	21
----	---	----	---	----

min. permissible temperature

max. permissible temperature

damp heat days

c) Class of safety protection

P0	No safety protection
P1	Safety achievable by external means (fuse)
P2	With internal safety protect

QUALITY

The great attention to the product quality and to the customer service are constants and these are main factors which contribute to its success all over the world.

The capacitor division, as described in Quality Manual, has been one of the first in Italy to be approved by CSQ according to ISO 9001

All is garantied thanks to fully automated and integrated processes, to completely new and innovative machines and technologies, to methodologies of the productive processes control based on accurate specifications and on responsible operator.

The aferent series are certified according to the new European EN 60252 standard.

Warning!

Misapplication, such as exceeding the design limits, use for applications different from those indicated in the catalogue or use for applications inappropriate for the characteristics of the type of capacitor used, may result in failure of the capacitor or in expulsion of the capacitor element from the case. Normal end of life failure is characterized by loss of capacitance increase in dissipation factor and/or permanent open circuit. The user is therefore cautioned to provide whatever additional protection or enclosure is necessary to avoid possible damage or injury in case of failure.

*Metallized polypropylene film
capacitors in plastic case
series 4.16.18/.10/.17/.15*

The dielectric is polypropylene film, the electrodes consist of an extremely thin metal coating obtained by vacuum evaporation. Case and cover are made with self-extinguishing plastic material, the capacitive element is sealed with polyurethanic resin.

The main characteristics of these capacitors are:

- Low losses non-inductive winding
- Self-healing property avoiding short circuits
- Small size and limited weight
- No leakage risk.
- Class of safety protection: PO

TECHNICAL CHARACTERISTIC

Capacitance tolerance	: $\pm 5\%$
Working frequency range	: 50 ÷ 60 Hz
Individual test voltage	: Between terminals: 2.15 Vn for 2 sec.; between terminals and case: 3KV for 2 sec.
Dissipation factor tan δ	: $<20 \cdot 10^{-4}$ @ 20°C V=Vn, 50Hz
Protection	Case and cover in self-extinguishing plastic material, grade V2 according to UL 94
Terminals	: Faston «terminals» 6.3 mm single, double, 2.8 mm plug-in, twin cable, unipolar leads
Protection degree	: with terminals: IP00; with twin cable IP55.
Cover	: Ball pressure test (IEC 309-1): 125°C Glow wire test (IEC 695-2-1): 850°C Tracking resistance (IEC 309-1): $\geq 250\text{V}$
Threaded fixing bolt	: Max torque: 5 N m

**Metallized polypropylene film
capacitors in metallic case
series 4.16.27/.25/.33/.26**

The dielectric is polypropylene film, the electrodes consist of an extremely thin metal coating obtained by vacuum evaporation.
The capacitor has no risks of leakage.

The cases are metallic, the covers are in self extinguishing plastic (class V2 to UL-94 standards).

The capacitor is sealed by an edging of the case on the cover, ensuring air-tight closure.

The use of an-insulating container between the capacitive element and the metal case, combined with the blocking of the capacitive element in resin, make the capacitor extremely safe both from the electric point of view (earthing insulation) and in terms of resistance to vibrations.

Series 16.25/.26/.27 capacitors are equipped with a safety device in accordance with VDE 0560-8/A1 and UL 810 standard. (Fig. 6).
The capacitors are certified according to CSA 22.2 N. 190-M1985.

TECHNICAL CHARACTERISTIC

Capacitance tolerance	: $\pm 5\%$
Working frequency	: 50/60 Hz
Individual test voltage	: Between terminals: 2.15 Vn for 2 sec.; between terminals and case: 3kV for 2 sec.
Dissipation factor tan δ	: $\leq 20 \cdot 10^{-4}$ @ 20°C $V=V_n$, 50 Hz
Protection	Aluminium case with plastic self extinguishing sealing cover, according to UL 94 Standard, Grade V2
Terminals	: Faston terminals 6.3 mm single, double 2.8 mm plug-in. Twin cable
Protection degree	: With terminals: IP00
Cover	: Ball pressure test (IEC 309-1): 125°C Glow wire test (IEC 695-2-1): 960°C Tracking resistance (IEC 309-1): $\geq 250\text{V}$
Threaded fixing bolt	: Max screwing torque: $M8 = 5 \text{ N m}; M12 = 12 \text{ N m}$
Safety device	: overpressure (Fig. 6)

This protection is provided by a special construction technology (patented) which breaks both the connections in case of breakdown, without affecting case insulation, preventing the capacitor from exploding or burning.

In case of permanent short-circuit, the current causes the dielectric to decompose, forming gas: the resulting pressure pushes up the part of the lid where the terminals are mounted, thus breaking the internal connections and stopping the current flow. (Fig. 6)

The device is designed in different sizes for each size of capacitor for the most effective, fastest intervention with both high and low short-circuit currents (up to 10.000 A).

In order to ensure proper operation of the device when the capacitor are installed, an empty space of at least 10 mm must be left above the terminals.

Because the new patented safety device is acting in the central part of the plastic deck only (see Fig. 5), it is possible to fix the capacitor with the system in use in the U.S.A. (Dog-house Clamps).

**Single phase motor starting
electrolytic capacitors
series 4.12.80**

Electrolytic capacitors are normally employed in single-phase induction motors in order to increase the value of their starting torque.

It is necessary that such starting should take place in a fraction of a second or at the most in a few seconds and with the contribution of an high reactive power.

Because of its reduced size, high capacitance value, the electrolytic capacitor is the suitable capacitor for this type of application.

Of course, once the motor has been started, the capacitor must be disconnected from the circuit.

The capacitive element is made of aluminium foils «treated» and separated by a leaf of impregnated paper as the electrolyte. Cases moulded in thermoplastic material, terminals tinned soldering and flat plug type.

TECHNICAL CHARACTERISTIC

Capacitance tolerance	: $\pm 10\%$
Protection	: Moulded thermoplastic self-extinguishing
Terminals	: Tinned soldering or 6.3 mm double tags
Construction	: Etched aluminium foil
Applications	: Starting of single phase motor
Operating temperature range	: $-10^\circ\text{C} + 55^\circ\text{C}$ VDE: $-10^\circ\text{C} + 60^\circ\text{C}$
Dissipation factor	: Typical 6% - Maximum 10%
Duty cycle	: 3'/1.7% :3s ON/3 min OFF (N=20 hour application application time $t=3''$; $N.t = 60$)
Extension of duty cycle	: These capacitors withstand heavier duty cycles than the rated one. For the below temperature operating, the product $N.t$ can be multiplied by the following factors:

Room temperature 55°C 45°C 35°C 25°C 15°C

Factor 1 1.25 1.5 1.75 2
