CLEANING GUIDELINES:
Ceilings, Walls, Suspension Systems, and Trim

Due to the potential impact on the finish, please follow the specific guidance below for general cleaning:

- It is recommended that only clear mild detergent cleaners be used, as dyed liquids can permanently discolor the finish of some ceiling tiles.
- Cleaning is only recommended for the finished face of the ceiling and wall panels.
- Mineral fiber and fiberglass ceiling and wall panels should never be soaked in water or other liquids.
- Custom colors or printed Create!™ Mineral fiber or fiberglass products should always use Cleaning Option 1.

Cleaning Option 1:

A commercial vacuum system with 100-inches/H2O vacuum capacity is recommended for removing dust particles. The vacuum system cleaning attachment should be a 3" diameter wand with natural hair bristle. A HEPA vacuum filter is recommended to minimize air borne dust during the cleaning process. Care must be taken while vacuuming to avoid excessive pressure. Use a blotting action to minimize potential damage of surface texture on ceiling and wall panels.

Cleaning Option 2:

Using a clean damp cloth or soft, smooth sponge with a mild, clear detergent, wipe lightly on the surface to remove any dirt. Dry any excess moisture with a clean, white microfiber cloth. Note: If moisture is not removed, it may stain the surface over time.

Cleaning conditions and aesthetics may be impacted by additional site conditions. These instructions pertain only to the maintenance of the aesthetics and integrity of Armstrong Ceiling & Wall Solutions products. Please consult the manufacturer's instructions and guidance regarding any cleaning product.
