Chapter 16
Proficient PFGMH Users - Example #2

Introduction

This Chapter will take advantage of what the User has learned over the last 15 Chapters. It will work Example #2 taking advantage of any shortcuts that are available in the Program, and it will not elaborate on how to use commands. It will show the User how Concepts can be quickly selected and easily tested to verify compliance with the Permanent Foundation Criteria found in the “Handbook”.

Example #2

- **Given:** John Smith desires a Permanent Foundation for a Single-Section Unit, nominal 14 foot wide manufactured home to be sited in Tampa, FL. The data on the Owner’s Site acceptability Worksheet remains the same as Example #1, with the exception of item #1. The grade elevation is 28 feet. The Manufacturer’s Worksheet remains the same with the following Exceptions:

- 1. Single - Section (Nominal 14’ wide unit)
- 2. Type C
- 7. Roof Slope = 4 in 12 (not slippery)
- 8. Unit weight ≈ 16,500 lbs.
- 10. Type C1
- 11a. Pier Spacing = 7 ft.
- 11b. N.A.
- 11c. N.A.
- 11d. 7 Tie-down straps at 8'-8” spacing
   Note: Tie-downs are required to be 2'-0” in from each end of the unit. (section 601-2.B.)
- 14. Design Wind = 120 MPH
- 16b. Uplift capacity = 3,150 lbs./diag. set
- 16c. Sliding capacity = 4,800 lbs./diag. set
- 16d. Sliding capacity = 4,800 lbs./diag. set
- 16e. Vertical X-bracing tension capacity = 5600 lbs./strap
Owner’s Site Acceptability Worksheet

- The User should select the Owner’s Site Acceptability Worksheet from the Worksheets pull-down menu. Use the following client information:
  - Name: John Smith
  - Address: 35 Brandywine
  - City, State: Tampa, FL
  - Remainder of information matches that of Example #1, except for grade elevation being = 28’-0”.
- The User can now select Print for a hard copy of the Form. See Appendix B for the completed Owner’s Site Acceptability Worksheet.

Manufacturer’s Worksheet

- The User should select the Manufacturer’s Worksheet from the Worksheets pull-down menu. Use the following Manufacturer information:
  - Name: New Homes
  - Address: 39 Peachtree Lane
  - City, State: Atlanta, GA
- Question #1: Select “Single-Section” with the mouse pointer and it will highlight with a black border. Select the button at the far end of the question to bring up the Superstructure Dimensions dialog window, fill in all the blanks with data as given and it will look as below:

Note: Do not select the Superstructure Dimensions Icon from the Main Tool Bar, if it is desired to have the dimensional data entered on the Manufacturer’s Worksheet. The User must choose the button at the end of question #1 for data to be entered in the boxes on the Form.
Note: User should always verify that units are typed with the dimensions. For example, if chassis width were typed in as 82, without the inch mark ("") the computer will assume it is 82 feet. Thus, the User should always check the down-arrow button Drop-down list box first, which always supplies the units.

- Question #2: Select the button at the far right of the question. The Foundation Design Concept dialog window will appear. Select Type C1.
- Question #8: Select the button at the far right of the question. The **Dead Loads** dialog window will appear. Complete the **Floor**, **Roof** and **Exterior Wall** Tabs to look as follows:

![Dead Loads Dialog Window](image)

![Floor Tab](image)

![Roof Tab](image)

![Exterior Wall Tab](image)
Select OK at the completion of these 3 Tabs and return to the Form, where the **Self weight** of the total unit will be entered as \((W) = 16,452\) lbs.

- Question #10: Foundation Concept Type **C1** will automatically be entered, based on your choice from question #2. Select the green typed and underlined Appendix A from the On-Line "Handbook" and review the **Foundation Selection Table** for suitability of the foundation type **C1** subjected to wind, seismic, and engineering design as shown below:

### A-100.5. Selection Table

**A-100.5. SELECTION TABLE.** The table immediately following can be used to select appropriate foundation types for sites with special requirements.

**FOUNDATION SELECTION CHART**

<table>
<thead>
<tr>
<th>Foundation Type</th>
<th>High Wind Zone</th>
<th>Engineering Design Required</th>
<th>Seismic Zone</th>
</tr>
</thead>
<tbody>
<tr>
<td>C1</td>
<td>All</td>
<td>Yes</td>
<td>All</td>
</tr>
<tr>
<td>Reinf. masonry</td>
<td>None</td>
<td>No</td>
<td>Some</td>
</tr>
<tr>
<td>Pier w/wire</td>
<td>X</td>
<td>Maybe</td>
<td>None</td>
</tr>
<tr>
<td>Tie-downs &amp;</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Diagonal tie</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Engineering design will likely be required for the Hurricane potential of Tampa, FL, while seismic is likely not an issue. Select the green typed and underlined **C1** to bring up typical plan, section and details for this type of Foundation selection. A portion of the information is as follows:

![Building Section Diagram](image)

**Note:** Typical Steel Tie-Down Strap: 1/4" x 1-1/4". Minimum Breaking Tension Strength = 4750 lbs (Ultimate Load). ASTM C268-83 OR FEDERAL 00-2-7810

</tr>
</thead>
<tbody>
<tr>
<td>Chassis supported single-wide</td>
<td>C1</td>
</tr>
</tbody>
</table>
• Questions #11a and 11d: Select the button at the far right of the question to bring up the **Recommended Pier Spacing** dialog window. Select the given 7'-0" pier spacing under the chassis beams. Type in the 8'-8" spacing and the number of tie downs is calculated as 7, which automatically appears in the box below. Select **OK** and return to the Form, where this information will automatically be entered.

• Questions #12 through #16f: The User can type in each answer according to the Given information that started Example #2.

• This completes the **Manufacturer's Worksheet**. Select **Print** for a hard copy. A sample output is found in Appendix B.

• The User can become acquainted with the Foundation Concept C1 with the Manufacturer's recommended superstructure geometry and foundation spacings by selecting **Graphics Window** from **View** on the pull-down menu bar as shown below, and using the **View Toolbar** to enlarge the perspective:
Design Worksheet

- The User should select the Design Worksheet - Header Information from the Worksheets pull-down menu. Use the following information:
  - Builder's Name: Grappo Industries.

Part 1 - Site Conditions

- The User should select the Design Worksheet - Part 1 - Site Conditions from the Worksheets pull-down menu. It is shown below completed. Many of the questions are of the "yes/no" type. Only the existing grade elevation = 28' has been automatically inserted.

- Question #9: The Frost Protection Depth is reviewed from selection of the green typed and underlined map H-4 as shown below. Note the contour shows "zero" for Tampa. Return to the Form and Type (0") in the blank box and answer "yes/no" to questions #10a, #10b, #11 to #13.
- Question #14: Select the green typed and underlined H-10 Termite Infestation map. The entire state of Florida is solid “black” which implies “Very heavy” infestation. Return to the Form and select “yes” and type in “very heavy”. Also, answer question #15, “yes/no”.
Part 2 - Site Preparation
- The User should select the Design Worksheet - Part 2 - Site Preparation from the Worksheets pull-down menu. Answer the "yes/no" questions. The completed portion of the Form is shown below.
Part 3 - Design Loads

- The User should select the Design Worksheet - Part 3 - Design Loads from the Worksheets pull-down menu. The first portion is shown below automatically filled in with previously entered data from the Manufacturer's Worksheet.

- Questions #25, #26, #27: Can be ignored since they really relate to use of the "Handbook" to proceed.

Snow Load/Minimum Roof Live Load

- Question #28a: Select the Roof LL Icon to bring up the dialog window. Select the Map button to bring up the Ground Snow Load Map. The "zero" appears across the state. Select "Unobstructed Slippery Roof". Select OK and the Form will be automatically filled in. Note that snow does not control; the minimum roof live load controls.
The User can view the **Live Loads** on the superstructure by selecting the **Graphics Window** from **View** on the Pull-Down Menu Bar and then selecting the **Live Load Icon** on
the View Toolbar as shown below. The roof live load and the floor live load are both shown.

Wind Load

- Question #31a: Select the Wind Load Icon to bring up the dialog window. Select the Map button to bring up the Basic Wind Speed Map and locate Tampa. Enter the value at the Tampa contour, as shown below, as 100 MPH and select “Coastal”. Select OK and the Form will automatically be filled in with these values.
The User can view the wind loads on the superstructure either in the transverse or longitudinal direction, just as done for the Live Loads, including ± internal pressure values as shown below:
Seismic Load

- Question #38a: Select the Seismic Load Icon to bring up the dialog window. Select the Map button to bring up the Seismic Coefficient Map Aa and locate the grayed Hillsborough County where Tampa resides. Read the contour as 0.05, as shown below. Repeat for Av and find 0.05 again. Enter these values in the dialog window. Select OK and the Form will automatically be filled in with these values.
Contour Map for Seismic Coefficient Aa

- Question #41: Answer "yes".
- The User can view the Seismic Inertia Forces on the superstructure either in the transverse or longitudinal direction. The transverse direction is shown below:

![Transverse Section]
Part 4 - Final Design Procedure

- Question #42 and #43 will be already filled in.
- Question #44: For the Foundation Concept C1, piers will only be located under the “chassis beams”. Make that choice and it will highlight with a black border.

- From the graphic above it is apparent that the Support is under the chassis beams and the Anchorage comes from tie-down straps that either wrap around the roof of the unit or attach to the side wall of the unit, and then attach to concrete deadmen below grade for ballast.
- Question #45 and #46: Answer “yes” to both, based on the graphic of a Type C1 shown above.
- The completed Part 4 is shown below.
Required Footing Size - Appendix A

- Question #47 and #48 are already filled in with the preliminary recommendations made by the Manufacturer. Select the Foundation Dimensions Icon to bring up the dialog window to visually see the arrangement of pier footings and dead-men anchor footings. Various options are available here to re-arrange the spacings within the dialog window. Select OK and return to the Form, which will be filled in automatically.

Note: The Transverse Lateral Resistance system has already been set up for Vertical X-Bracing Planes, since this is the most likely transverse sliding resistance option. Also, the minimum number of such bracing planes is shown as two, which starts the User on the trial-and-error process for required (Ah).
Required Footing Size - Appendix B

- Question #49: Select the Gravity Load Footing Size Icon to bring up the dialog window. The Preliminary spacing of 7'-0" produces a square footing 2'-3" on a side based on a net allowable soil bearing pressure of 1000 psf. If this is satisfactory select OK and return to the Form, where the information will automatically be entered in the boxes.

- Questions #50, #51a & #51b do not apply to a Type C1 foundation option.
Vertical Anchorage Requirements in the Transverse Direction - $A_v$ - Overturning & Uplift

- Question #52a: Select the Overturning Icon to bring up the dialog window. Using tie-down straps at 8'-8" on center, will produce a vertical anchorage force $A_v = 2,570$ lbs. Select the button next to the spacing to bring up the Foundation Dimensions dialog window to revise the spacing as required. Review the loads summary. Select OK, if satisfied, and return to the Form where choices made will automatically be filled in.
Note: The Required (Av) is less than the manufacturer’s rated connection capacity for uplift and overturning. If the Required (Av) was greater than the manufacturer’s rated connection capacity, a closer spacing of deadman tie-downs would have been required, meaning more than 7 anchor locations.

Horizontal Anchorage Requirements in the Transverse Direction - Ah - Sliding

- Question #55a & #56: Select the Transverse Sliding Icon to bring up the dialog window. Start with two vertical X-bracing planes and find the horizontal anchorage force/foot as (Ah) = 858 lbs/ft. Select the button next to the "number of transverse lateral resistance locations" to bring up the Foundation Dimensions dialog window to revise and view in plan the layout of the foundation if the number of Vertical X-bracing Planes is changed to 4.
Note: PFGMH always maintains symmetry in lateral load resistance planes and re-spaces pier footings under the chassis beams likewise in a symmetrical arrangement. This results in more piers and pier footings. Thus, always use the least number of lateral resistance planes for economy. Note that the exterior and interior planes carry less horizontal force per foot than if two vertical X-Bracing Planes are used. This would be the process if the Manufacturer’s rated connection capacity for sliding was less than (Ah).
- Return to the choice of two vertical X-bracing planes, since the Required (Ah) is less than the 4800 lbs/ft supplied by the Manufacturer. Select OK, and return to the Form where final choices made will automatically be filled in.

- Question #59: The vertical X-Bracing straps or rods must be checked for sufficient tensile capacity. Even though the superstructure can withstand horizontal connection forces per foot of 4800 lbs/ft, the straps that the manufacturer or supplier suggests have a rated allowable tensile capacity of 5600 lbs. (not lbs/ft). The equations the program uses to convert the horizontal force per foot into a diagonal force to each strap are developed in the On-Line "Handbook". This is accessible through the green typed and underlined sections. The User should type in an estimated (h) for question #59d, say 4'-0", and the Form will supply the (T).

**Figure 6-10**
• Question #61a: The answer is "no" and the iteration process begins. Return to question #59 and try more Vertical X-Bracing Planes, say 6.
Six Vertical X-Bracing Planes, as shown above in the **Foundation Dimensions** dialog window will produce a strap tensile force less than the allowable of 5600 lbs. The answer to question #61a is now “yes”. This is shown below upon return to the Form.

---

**Horizontal Anchorage Requirements in the Longitudinal Direction - Ah - Sliding**

- Question #62a: Select the **Longitudinal Sliding Icon** to bring up the dialog window. Using Vertical X-Bracing Planes under the chassis beam lines requires manipulation of the calculated horizontal anchorage force $Ah = 46 \text{ lbs/ft}$ to a value in pounds (B). Seismic inertia force can be ignored, but it is interesting that 4 lbs/ft would be produced. Select **OK**, if satisfied, and return to the Form where the (Ah) value has already been inserted in the box.
• Question #62b.1: Since this is a Single-Section Unit, only two chassis beam lines are available for vertical X-Bracing Planes. The (2) is automatically placed in the box. Also, it is typical to begin with the least number of Vertical X-Bracing planes under each chassis beam, thus (2) should be typed in the Box.

• Question #62b.2: Once the (2) is typed in the box above, the Required Horizontal Anchorage Force (B) is automatically calculated based on the formula found in the On-Line "Handbook". Section 602-6.E is green typed and underlined and therefore can be selected. The green typed and underlined Figure 6-11 helps visualize the process and shows the variables as shown below:
Question #62b.3: The (h-b) dimension is selected based on h = 4' and the chassis beam depth (b) being about one foot. Thus, (h-b) = 3'-0" and once this is typed in the box the required tension force \( (T_L) \) is automatically calculated according the formula in Section 602-6.F(3).

Question #63: The manufacturer's supplied value for horizontal anchorage to the superstructure is automatically inserted in the box as 4800 lbs/diag, set. The User continues to scroll down the Form as shown below:

Question #64b.: The box already contains the answer “yes”, since the computer makes the comparison, and finds that \( (B) \) is smaller than the manufacturer's supplied value of 4800 lbs.

Question #65 and #66: The required tension in a strap was calculated to be \( (T_L) = 1471 \) lbs., which is far less than the Manufacturer’s supplier value of 5600 lbs. The Form automatically shows the answer “yes” and this completes the Required Longitudinal Anchorage Force discussion.
Withdrawal Resistance Verification - Appendix C

- Select Part 4 - Withdrawal Resistance from the Worksheets pull-down menu and skip question #67(a) of the Form that deals with Exterior long foundation walls. Scroll down to question #67(b) - Withdrawal Resistance for Piers. This section also deals with Foundation Type C1 Concrete “Deadman” withdrawal resistance, as shown below. Note that frost depth of “zero” is in the box. The program has automatically selected a depth \( h_p = 32 \) inches and a square deadman of side \( W_p = 36 \) inches. Select the green typed and underlined Table C-2 to access the On-Line “Handbook” and verify the program’s choice, knowing that the Required \( (A_v) = 2570 \) lbs. Also, “Reinforced Concrete Deadman” has been highlighted automatically for the Type C1 foundation system on the Form.

Note: The User does not select a value from the table and highlight it to make a selection. The program does this automatically. The highlight is merely to make the value easier to find.
Table C-2
Withdrawal Resistance For Piers (2, 3)
(In pounds per pier)

<table>
<thead>
<tr>
<th>Hp Depth</th>
<th>1'-0&quot; (4)</th>
<th>2'-0&quot;</th>
<th>3'-0&quot;</th>
<th>4'-0&quot; (4)</th>
</tr>
</thead>
<tbody>
<tr>
<td>2'-0&quot;</td>
<td>279</td>
<td>997</td>
<td>2097</td>
<td>3755</td>
</tr>
<tr>
<td>2'-8&quot;</td>
<td>361</td>
<td>1322</td>
<td></td>
<td>5049</td>
</tr>
<tr>
<td>3'-4&quot;</td>
<td>442</td>
<td>1643</td>
<td>3541</td>
<td>6325</td>
</tr>
<tr>
<td>4'-0&quot;</td>
<td>525</td>
<td>1967</td>
<td>4267</td>
<td>7617</td>
</tr>
<tr>
<td>4'-8&quot;</td>
<td>607</td>
<td>2292</td>
<td>4994</td>
<td>8911</td>
</tr>
</tbody>
</table>

- Continue to scroll down the Form to reveal the remainder of the information automatically filled in the boxes. This tells you that "withdrawal" controls over frost depth and that the "deadman" width is 36" for a square concrete anchor.

Vertical Anchorage and Reinforcement for Longitudinal Foundation Walls and Piers
- This portion of the Design Worksheet is not needed for a Type C1 Foundation Concept. Vertical anchorage for
overturning and uplift is provided by the straps and “concrete deadman” anchors.

**Horizontal Anchorage and Reinforcement for Transverse Foundation Walls**

- Parts #69a and #69b of the Design Worksheet are not needed for a Type C1 Foundation Concept. Horizontal anchorage for sliding is provided by the Vertical X-Bracing Planes, thus Part #69c is required, as shown below:

- Question #69c.(1) to (5): Item (1) is the horizontal force (C) brought forward from question #59c. Item (2) is the 1800 lbs, which is the shear capacity of one 1/2" anchor bolt from Table C-5A in Appendix C of the “Handbook”. Item (3) is the number of bolts required to resist the horizontal shear: \((C + 1800)\), rounded to the next highest whole number. Thus, 3 bolts are required. Item (4) is the required tension force (\(T_d\)) in a diagonal strap, which was brought forward from question #59e. Item (5) is the manufacturer’s supplier’s allowable tension capacity, which is larger than required so it is OK. Item (6) is typed in by the User, based on the size provided by the supplier’s catalog.

**Note:** This must be galvanized steel for the corrosive nature of steel adjacent to ground.
Horizontal Anchorage for Longitudinal Foundation Walls

- Question #70a.1 and 2: This portion of the Design Worksheet is not needed for a Type C1 Foundation Concept. Horizontal anchorage for sliding in the longitudinal direction is provided by Vertical X-Bracing Planes under the chassis beams. Scroll down to that topic.
- Question #70b.(1) to (6): Item (1) is the required horizontal force (B) brought forward from question #62b.2. Item (2) and item (3) were discussed above. Item (4) is the required diagonal tension force (T_d) calculated in question #62b.4. The remaining two items were also discussed above.

Summary Sheet

- The Summary Sheet is selected from the Worksheets pull-down menu. It is filled in with the results and decisions made and entered in the boxes of the Form for the Type C1 Foundation Concept located in Tampa, FL.
- Select the Print Icon while in any of the parts of the Design Worksheet and create a hardcopy output. See Appendix B for a sample output.
- Select Graphics Window from the View pull-down menu to see the final views of the Foundation Type C1 selected.
- Use the View Toolbar to manipulate the perspective view.
Appendix A

Example #1 - Foundation Concept Type E1

Multi-Section Unit
APPENDIX E
OWNER'S SITE ACCEPTABILITY WORKSHEET

Owner's Name: John Doe

Address: 1600 S. First Street

Champaign, IL

Telephone: 217/345-4856

Site Location: Champaign, IL

Legal Description:

Have you provided a copy of a map pinpointing the site? yes no

Have you submitted a foundation plan? yes no
(See #10 of Manufacturer's Worksheet)

Preliminary Site Information

Before approval of the site can begin, the applicant must provide preliminary site information to the field office. Refer to Chapter 2, "Site Acceptability Criteria" for clarification.

1. Provide survey results showing existing grade elevation. (201-1) N.A. ft.

2. Is the building in a flood-prone area? (201-2)
   If the answer to 2 is Yes, answer 3, 4, & 5.
   If the answer to 2 is No, answer 6, below.

   yes no
3. What is the Base Flood Elevation?
   What is the Flood Protection Elevation?
   
4. Has approval for drainage, grading and berming been approved for flood-prone sites?
   
5. Have permits been provided?
   (Permits must be obtained for any alteration of the building site in a flood protection area.)
   
6. Provide geotechnical report in areas of known high water table. (201-4)
   
7. Provide geotechnical report if adverse site conditions are found or suspected. (203)
   
8. Provide site-drainage plan complying with CABO R301.3 or local requirements. (301)
   
9. Provide fill specifications if site is to be prepared with earth fill. (303-2)
   
10. If a geotechnical report is required, what is the net allowable soil bearing pressure? (202)
    
11. If no adverse soil conditions are known or suspected, and if the home is individually sited, assume a soil bearing pressure of 1,000 psf. and use this value when a determination of soil bearing pressure is called for.
    
   _______ ft. 
   _______ ft. 
   yes  no 
   yes  no 
   yes  no 
   _______ 0  psf. 
   1,000 psf.
APPENDIX E
MANUFACTURER'S WORKSHEET

Manufacturer's Company Name: **Howard Smith Co, Inc.**
Address: 1904 W. 75th Street
New York, N.Y.

Telephone: **314/329-xxxx**

**Determination of Building Structure and Size**

The manufacturer shall provide the following information:

1. Type of unit

<table>
<thead>
<tr>
<th>Single-Section</th>
<th>Multi-Section</th>
</tr>
</thead>
<tbody>
<tr>
<td>E</td>
<td></td>
</tr>
<tr>
<td>56'-0&quot; ft.</td>
<td></td>
</tr>
</tbody>
</table>

2. Method, location and types of support:
Refer to Figures 6-7 and 6-8 and Section 601-4.
Is the home a C, E, or I?

3. Length of unit L

4. Actual width of unit Wt

5. Height of exterior wall **

6. Height of roof peak **

7. Roof slope **

8. Self weight of total unit (W) including mechanical equipment **

9. Distance between chassis members

10. One foundation design concept (See Appendix A) (C1-C4; E1-E8; or I)

<table>
<thead>
<tr>
<th>E</th>
<th>38,766 lbs.</th>
</tr>
</thead>
<tbody>
<tr>
<td>2 in 12</td>
<td>82.0&quot; ft.</td>
</tr>
</tbody>
</table>
11. Recommended pier spacing **
   a. Exterior 5'-0" ft.
   b. Interior 5'-0" ft.
   c. Continuous Marriage Wall 8'-0" ft.
      Length of largest isolated marriage wall opening or average of
      largest two adjacent openings 14'-0" ft.
   d. Tie-down Strap (C1 concept only) (Number) ft. (Spacing)

12. One installation method recommendations (include documentation showing connection details pertinent to geographic area for seismic or wind). **
   yes no

13. Interior shear wall locations (include documentation showing locations). **
   yes no

14. Design wind speed used in designing connection details for horizontal anchorage (Ah) and vertical anchorage (Av) in the transverse direction. **
   100 mph.

15. Seismic acceleration values used in designing connection details for horizontal anchorage (Ah) in the transverse and longitudinal directions. **
   Av 0.05
   Aa 0.05

16. Shear wall connection details with rated capacity for wind and seismic are provided. ** †
   a. Connection locations at foundation end and interior walls shown? **
      yes no
   b. Rated connection capacity for uplift and overturning ** 200 lbs./ft.
      (or lbs./tie-down)
   c. Rated connection capacity for sliding in transverse direction ** 400 lbs./ft.
      (or lbs./diag. strap)
   d. Rated connection capacity for sliding in longitudinal direction ** 400 lbs./ft.
   e. Vertical X-bracing tension strap capacity **
      N.A.
      lbs./diag. strap
f. Engineering calculation by licensed structural engineer? **

**Optional values:** It is optional for the manufacturer to provide these values. If the manufacturer does not provide the values, it is the responsibility of the owner to supply values, based on engineering analysis by a licensed structural engineer.

† Item 16 is provided in California.
APPENDIX F
DESIGN WORKSHEET

Owner's Name:  John Doe

Address:  1600 S. First Street, Champaign, IL

Builder's Name:  ACME LTD.

Site Location:  Champaign, IL

PART 1: SITE CONDITIONS
(Accompanies Chapter 2)

1. Has the Manufacturer's Worksheet been provided?  yes  no

Existing Grade Elevation (201-1)

2. Does the site require a survey?
   (Answer yes if: 1) elev. to be altered by grade or fill; 2) site near
   flood zone; 3) subdivision. Answer no if individually-sited with
   no alteration of building site.)  yes  no

3. If yes to above, what is the surveyed existing elevation?  N.A.  ft.

Flood Protection Elevation (201-2)

4. Is the building site in a flood zone?
   (If yes to 4, then answer 5, 6, & 7. If no, skip to 9.)  yes  no

5. What is the Base Flood Elevation or the Flood Protection Elevation
   (use highest value)?  ft.

6. Is the site to be graded, filled, or bermed?
   (If no, skip to 9.)  yes  no

7. If yes to 6, have all permits been provided?  yes  no

8. If no to 6, then are the buildings to be built on elevated foundations?
   (If yes, this handbook cannot be used. Refer to FEMA Manual.)  yes  no
Frost Penetration Depth (201-3)

9. What is the maximum frost penetration depth? (see Appendix H, page H-4) 30 in.

10a. Does foundation plan show base of footing extending below frost penetration depth? (If yes proceed; if no, applicant should revise plans.)

yes no

10b. Does foundation plan show base of footing extending below topsoil layer (min. 12") to undisturbed soil?

yes no

Ground Water Table Elevation (201-4)

11. For subdivisions, does a Geotechnical Engineer recommend drainage of subsurface water? (If no, skip to 13.)

yes no

12. Has groundwater drainage plan been provided?

yes no

Soil Conditions (202, 203)

13. If any of the following adverse site conditions are discovered, specific recommendations by a Geotechnical Engineer will be required (applies to subdivisions and individually-sited homes.)

Organic soil (8" topsoil layer) yes no

Expansive (shrink-swell) soil yes no

Sloping site yes no

Subsidence yes no

(Applicant may be referred to Geotechnical Engineer if any of the above are yes. If no, to all of above, move to next step.)

14. Is area in a known termite infestation area? yes no

Region classification? Moderate to heavy
(See Appendix H, Termite Infestation Map, page H-10) (If no, skip to 16.)

15. Has applicant complied with CABO R-308 or local ordinance for construction procedures and treatment? (If yes, continue; if no, refer applicant to CABO requirements.) yes no
PART 2: SITE PREPARATION
(Accompanies Chapter 3)

16. Acceptable surface drainage plan provided? (301)
   (If no, one must be provided for subdivision)
   yes no

17. Grading plan provided? (302)
   yes no

18. Fill specifications conforming to those cited in HUD Land Planning Data Sheet (79g)? (303)
   (If fill is used, below the home's foundation, a report by Geotech.
   Eng. should be submitted to provide fill specifications.)
   yes no

19. Finish grade elevation? (304)
   (Check answers to Part 1: #4 & #5. The finish grade elevation
   must be higher than #5 if in flood zone.)
   __________ *

PART 3: DESIGN LOADS
(Accompanies Chapter 4)

Information from Manufacturer's Worksheet

20. Has all the information been provided on the Manufacturer's
    Worksheet? (Appendix E)
    yes no

21. What is the building self weight (W)?
    (Mfg. Wksht. #8)
    38,525 lbs.

22. What is the building length (L)?
    (Mfg. Wksht. #3)
    56'-0"

23. What is the distributed weight per foot of unit length? (w=W/L)
    (402-B, C)
    688 lbs./ft.

24. What is the building type?
    (Mfg. WkSht. #2)
    Single-Section
    Multi-Section
    C [E, or I
    E1 *

Foundation design concept?
(C1, C2, C3, C4, E1, E3, E4, E5, E6, E7, E8, I)
Dead Load (402-1)

25. What is the light dead load value from Table 4-1? 
   (402-1.A.1)  
   560 * 
   (lbs./ft.)

26. What is the heavy dead load value from Table 4-1? 
   (402-1.A.2)  
   805 * 
   (lbs./ft.)

27. Does the answer from Question #23 fall within the values in #25 and #26? (402-1.D) 
   (If the answer is yes, continue. If no, the foundation is not within the limits of this document and must be redesigned by a structural engineer.)  
   yes no

Snow Load (402-2) / Minimum Roof Live Load (402-2.C)

28a. What is average annual ground snowfall (Pg)? 
   (See Ground Snow Load map, pages H-11, H-12 and H-13.)  
   20 * 
   (lbs./sq.ft.)

28b. What is 0.7 multiplied by Pg?  
   14.0 psf.

29a. What is the roof slope? (Mfg. Wksh. #7)  
   2 in 12

29b. What is the minimum roof live load for the roof slope? 
   (D-200.2.B)  
   20.0 psf.

30. Record the larger magnitude of item 28b or item 29b. Use this magnitude for roof load where required.  
   20.0 psf.

Wind Load (402-3)

31a. What is the basic wind speed (V)? 
   (See Wind Speed map, page H-14.)  
   70 mph

31b. If V is less than 80 mph, record MPS min. 80 mph for wind des- 
    sign. (402-3.A)  
   80 mph

32. Is the site inland or coastal? (402-3.B) 
   (If inland, skip to question #38.)  
   Inland Coastal

33. If a coastal area, has the manufacturer provided connection de- 
    tails? (402-3.D) (Mfg. Wksh. #12)  
   yes no
34. If yes to #33, what design wind speed has the manufacturer used in designing connection details?  
(Mfg. Wksht. #14)  
\[ 100 \text{ mph} \]

35. Are the connection locations shown? (Mfg. Wksht. #16a)  
\[ \text{yes} \quad \text{no} \]

36. Are connection details provided for foundation shear walls?  
(For an answer of yes, all questions under Mfg. Wksht #16 must be answered satisfactorily.)  
\[ \text{yes} \quad \text{no} \]

37. Is the value for Question 34 equal to or greater than the number given in Question 31?  
(If yes, proceed. If no, return design to manufacturer for clarification.)  
\[ \text{yes} \quad \text{no} \]

**Seismic Load**

38a. What are the seismic acceleration values?  
(See Seismic maps, pages H-15 and H-16)  
\[ \Delta a \quad 0.05 \quad \ast \]
\[ \Delta v \quad 0.05 \quad \ast \]

38b. Is \( \Delta v < 0.15? \)  
(If no, proceed. If yes, seismic need not be considered, skip questions 39 to 41.)  
\[ \text{yes} \quad \text{no} \]

(See H-300 for Special Requirements of Foundation Design.)

40. What is the applicant's proposed design concept?  
(Design Wksht. #24)  
\[ \text{E1} \quad \ast \]

41. Do the Foundation Design Concept Tables approve the foundation system for use in seismic areas of Question #38 above?  
(See Appendix A)  
(If yes, proceed. If no, return to applicant for foundation design choice more suited to high seismic areas.)  
\[ \text{yes} \quad \text{no} \]

**PART 4: FINAL DESIGN PROCEDURE**  
(Accompanies Chapter 6)

42. What is the actual building width?  
(Mfg. Wksht. #4)  
\[ 13'-8" \quad \text{ft.} \]
43. The nominal building width to be used in the Foundation Design Tables, (Aftg, Av & Ah) is Wt: 14'-0" ft. (600-2.A and Figure 6-1)

44. Where are the foundation supports located? Check drawings submitted by the owner and Foundation Design Concepts in Appendix A. Circle the support locations shown on the Manufacturer's foundation concept plan.

45. Do these locations match the Foundation Concept shown in Appendix A? Do the locations match Question #24 on the Design Worksheet? (If yes, proceed. If no, return to Owner for clarification.)

APPENDIX A

47. What is the basic system type? (From Part 3: #24; Mfg. Wksht. #2)

48. What is the spacing between piers? (Mfg. Wksht. #11) (602-2)
   Exterior: 5'-0"
   Interior: 5'-0"
   Continuous Marriage Wall: 8'-0"
   Largest or Average Marriage Wall Opening: 14'-0" ft.
   Tie Down (C1) __________ ft.

APPENDIX B

Required Footing Size

49. The required Exterior Wall Footing, for the foundation type, is found in the Required Effective Footing Area table in App. B, Part 1. (Use maximum value from item #30.)

   The Required Exterior Square Footing size is:

   Type C __________ sq.

   Type E or 1 __________ ft. (width)
50. The Required Interior Footing area is: 
(Also exterior piers for foundation type E) 

2.0 sq.ft. 

51a. The Required Continuous Marriage Wall Footing area is: 

6.8 sq.ft. 

51b. The Required Footing area under posts at the ends of marriage wall opening(s) is: 

11.0 sq.ft. 

Vertical Anchorage Requirements in the Transverse Direction (602-4) 

Exterior Av 

65 * 
(lbs./pier spacing; 
lbs./ft. for E type; 
lbs./tie-down spacing) 

52b. Number of vertical tie-down locations for multi-section units: 

2 or 4 or 6 

52c. For units with additional vertical anchorage at the interior piers, determine the Required Vertical Anchorage. 

Interior Av 

* 
(lbs./int. pier spacing) 

53. What is the manufacturer-supplied value? 
(#16b, Mfg. WkSh.) 

Exterior 200 * 
Interior * 

54. Is this value (#53) greater than the value given in #52a? 
(If yes, continue. If no, return to owner for clarification.) 

yes no 

Horizontal Anchorage Requirements In The Transverse Direction (602-5) 

55a. What number of transverse foundation walls was selected? (602-5.E) (If vertical X-bracing planes are used, complete items #55a, #56 and #57 for 2 transverse walls, and then skip to item #59.) 

2 

55b. Are diagonal ties used to complete the top of the transverse short wall for horizontal anchorage? (602-5.G.1) 

yes no 

Estimate height (h) for appropriate illustration in Figure 6-10. 

10" ft.
56. Using the tables, find the Required Horizontal Anchorage (Ah). (Appendix B; Part 3)

<table>
<thead>

</table>

62b. If using vertical X-bracing planes (and the formulas in section 602-6.F) determine anchorage value for X-bracing planes. (If using exterior long walls, skip to item #63.)

1. Number of chassis beam lines used for vertical X-bracing planes.
Number of X-bracing planes proposed under each chassis beam along the length of the unit.

2. Horizontal anchorage (B) required force, based on formula.

3. Assumed height (h-b) based on Figure 6-11.

4. Tension (T_f) based on formula.
   \[
   (602-6.F.(3))
   \]

63. What is the manufacturer-supplied value for horizontal anchorage? (#16d, Mfg. WkSh.)

64a. For shear walls: is value #63 greater than #62a?
   If yes, skip to item #67. If no, contact owner for clarification.

64b. For X-bracing: is value #63 greater than value #62b.2?
   If yes, return to item #62b.3. If no, increase number of vertical X-bracing planes and repeat items 62b.1 and 62b.2 until answer is yes. For multi-section units consider 4 lines of vertical X-bracing under all chassis beams.

65. What is the manufacturer-supplied rated strap tension?
   (#16e, Mfg. WkSh. or product supplier)

66. Is value #65 greater than #62b.4?
   If yes, continue. If no, contact owner to obtain straps with greater capacity, or return to item #62b.1 and increase the number of vertical X-bracing planes until answer is yes.

**APPENDIX C**

Withdrawal Resistance Verification (603-2.2)

67. Using Appendix C, Table C-1 or C-2, verify that the foundation system will resist withdrawal. Answer question #67a for type E. Answer question #67b for types C, I, or type E with interior pier anchorage.

\[
\begin{align*}
\text{Exterior Grade} & \quad 12^\circ \\
\text{h_w} & = \text{Frost Depth} \\
\text{Depth of Frost} & = 24'' \\
\end{align*}
\]

(\text{Table C-})
a. **Withdrawal Resistance for long foundation wall.** (Type E)
   Circle the type of material that is to be used.

   1) Using Table C-1, which capacity is greater than required Av? (603-2.B.1)(#52a)
      \[ \text{231 lbs./ft.} \]

   2) Using Table C-1, what is the height of the wall + footing for required withdrawal resistance? (hw + 6")
      \[ \text{30" in.} \]

   3) What is the height of the wall + footing for frost protection? (frost depth (#9) + 12")
      \[ \text{42" in.} \]

   4) What is the greatest height #67a.2 or #67a.3?
      Circle the height which controls.

   5) Record the bottom of footing depth from grade.
      (Item #67a.4 - 12")
      \[ \text{30" in.} \]

   6) Using Table C-1, what is the required width of the wall footing for withdrawal?
      \[ \text{12" in.} \]

   7) Is item #67a.6 greater than or equal to item #49?
      If yes, continue. If no, change footing width to item #49.

   8) Record design exterior wall footing width.

b. **Withdrawal Resistance for Piers.** (Types C, C1 (concrete dead-man), I or type E with interior pier anchorage - multi-section units.)

   Circle pier type:
   - Reinforced Concrete
   - Reinforced Masonry - fully grouted
   - Reinforced Concrete Dead-man
1) Using Table C-2, which capacity is greater than required Av? (#52a and #52c) (603-2.B.(2))

   Exterior
   (when used)
   __________
   __________ lbs./p.

2) Using Table C-2, what is the height of the pier + footing for required withdrawal resistance?
   (hp + 8")

   __________
   __________ in. *

3) What is the required height of pier + footing for frost protection? (frost depth (#9) + 12")

   __________
   __________ in.

4) What is the greatest height #67b.2 or #67b.3?

   __________
   __________ in.

   Circle the height which controls.

   Withdrawal Frost Depth
   Withdrawal Frost Depth

5) Record the bottom of footing depth from grade.
   (Item #67b.4 - 12")

   __________
   __________ in.

6) Using Table C-2, what is the required width of the square footing if withdrawal resistance controls or if frost depth controls?

   __________
   __________ in. *

   c. **Frost depth for marriage walls.** What is the required depth of footing below grade for frost protection? (frost depth (#9))
   (no withdrawal resistance)

   __________
   __________ in.

   **Vertical Anchorage and Reinforcement for Longitudinal Foundation Walls and Piers (603-2.D)**

68. Using Appendix C, Table C-3, C-4A or C-4B, verify that the foundation anchors will resist uplift. Answer question #68a for type E. Answer question #68b for types C, I, or type E with interior pier anchorage.

   a. **Vertical Anchor Capacity for longitudinal foundation wall**
   (type E). (603-2.D.2)

   1) Using Table C-4A (concrete & masonry), which capacity is greater than the required Av? (#52a, Design Wksht.)

   If treated wood wall, skip to item #68a.3.

   __________
   __________ lbs./linear ft. of wall
Circle correct washer choice for the capacity selected

2) Using Table C-4A (masonry and concrete):
   a) Required anchor bolt diameter
      \[ 1/2" \text{ in.} \]
   b) Required anchor bolt spacing
      \[ 6'-0" \text{ in.} \]
   c) Using Table C-3A:
      (1) Rebar size
          \[ #4 \text{ * } \]
      (2) Lap splice
          \[ 16" \text{ in.} \]
      (3) Rebar hook length
          \[ 6" \text{ in.} \]

3) Using Table C-4B (wood), which capacity is greater than the required Av? (#52a, Design Wksht.)
   If using concrete or masonry wall, skip to item #6b.
   \[ \text{lbs./lineal ft. of wall} \]

4) Using Table C-4B (wood):
   a) Required nailing
      \[ \text{* } \]
   b) Minimum plywood thickness
      \[ \text{in.} \]
   c) Required anchor bolt diameter
      \[ \text{in.} \]
   d) Required anchor bolt spacing
      \[ \text{in.} \]

b. \textit{Vertical Anchor Capacity for Piers}
   (Types C, I, or type E with interior pier anchorage)
   (603-2.D.1)
   \[ \text{Exterior} \quad \text{Interior} \]
   \[ \text{Exterior} \] \[ \text{Interior} \]
   \[ \text{when used for anchorage in multi-section units} \]
   1) Using Table C-3, which capacity in the table is greater than the required Av?
      (From #52a, Design Wksht.)
      \[ \text{lbs./pier} \]
2) Using Table C-3:
   a) Number of anchor bolts
      1 or 2  
   b) Anchor diameter
      1/2” or 5/8”  
3) Using Table C-3A:
   a) Rebar size
      #4 or #5
   b) Lap splice
      _____ in.
   c) Rebar hook length
      _____ in.

Horizontal Anchorage and Reinforcement for Transverse Foundation Walls (603-3)

69. Using Appendix C, Table C-5A or C-5B, verify that the foundation anchorage will resist sliding at the transverse end foundation walls. Use for types C, E, or I.

   a. For continuous foundations.

Using Table C-5A (concrete & masonry) or C-5B (wood), which capacity is greater than the required (Ah) (603-3) (item #56)?

   1) Using Table C-5A, find:
      a) Required anchor bolt diameter
      1/2” in.
      b) Required anchor bolt spacing
      72” o.c. in.
      c) Using Table C-3A:
         (1) Rebar size
         #4 *
         (2) Lap splice
         16” in.
         (3) Rebar hook length
         6” in.

   2) Using Table C-5B, find:
      a) Required nailing

   End Wall    Interior Wall
   300 _______ lbs./f
### End Wall | Interior Wall
---|---
| Minimum plywood thickness | in. |
| Required anchor bolt diameter | in. |
| Required anchor bolt spacing | in. |

b. **For short foundation walls completed with diagonal braces.**
(603-5)

Using Appendix C, Table C-5A, verify the diagonal anchorage capacity to the short foundation wall.

| End | Interior |
---|---|
| Record the required horizontal force \( (Ah \times Wt) \) from 602-5.G.1.a and item #56. | lbs. |
1800 | 1800 |
| Table C-5A capacity for one 1/2" diameter bolt at 12" o.c. | lbs. |
| Number of bolts \( (Ah \times Wt \div 1800; \text{one minimum}) \) at concrete or masonry top of short wall. | * |
| Size of anchor bolts | in. |
| Using Table C-3A: | |
| Rebar size | * |
| Lap splice | in. |
| Rebar hook length | in. |

c. **For vertical X-bracing planes in the transverse direction.**
(603-6)

Using Appendix C, Table C-5A, verify the diagonal anchorage to the pier footings and the tension capacity of the diagonals.

<table>
<thead>

Required anchor bolt diameter __________ in.
Number of bolts at top of footing to connect diagonal __________

Diagonal strap size __________

Connection to top flange of chassis beam (describe) ________________________

c. Horizontal anchorage in the longitudinal direction - exterior foundation walls

1. Continuous foundation walls

Reinforcing for longitudinal foundation walls: record only if larger sizes or closer spacing than recorded for vertical anchorage (#71a.2).

From #70a.1: concrete / masonry:

Anchor bolt diameter __________ 1/2" in.
Anchor bolt spacing __________ 72" o.c. in.
Rebar size __________ #4 in.
Lap splice __________ 16" in.
Rebar hook length __________ 6" in.

From #70a.2: wood: record only if larger sizes or closer spacings than recorded for vertical anchorage (#71a.2)

Required nailing __________
Minimum plywood nailer __________
Anchor bolt diameter __________
Anchor bolt spacing __________ in.
2. *Vertical X-bracing planes under chassis beam lines*  
(#70b.)

Number of X-brace locations along one chassis beam line. 

Spacing of X-brace locations along one chassis beam line. 

Required anchor bolt diameter. 

Number of bolts at top of footing at connection to the diagonal. 

Diagonal strap size. 

Connection to bottom flange of chassis beam (describe). 

72. Do foundation dimensions and details comply with Foundation Capacities Table, based on Foundation Design Table Values? 

   yes  no

73. If #72 yes, approve. If no, return to applicant.
Appendix B

Example #2 - Foundation Concept Type C1

Single-Section Unit
APPENDIX E
OWNER'S SITE ACCEPTABILITY WORKSHEET

Owner's Name: John Smith
Address: 35 Brandywine
Tampa, FL

Telephone: xxx/234-9879
Site Location: Tampa, FL

Legal Description:

Have you provided a copy of a map pinpointing the site? yes no
Have you submitted a foundation plan? (See #10 of Manufacturer's Worksheet) yes no

Preliminary Site Information

Before approval of the site can begin, the applicant must provide preliminary site information to the field office. Refer to Chapter 2, "Site Acceptability Criteria" for clarification.

1. Provide survey results showing existing grade elevation. (201-1) 28 ft.

2. Is the building in a flood-prone area? (201-2)
   If the answer to 2 is Yes, answer 3, 4, & 5.
   If the answer to 2 is No, answer 6, below.
3. What is the Base Flood Elevation?

What is the Flood Protection Elevation?

4. Has approval for drainage, grading and berming been approved for flood-prone sites?

5. Have permits been provided?
   (Permits must be obtained for any alteration of the building site in a flood protection area.)

6. Provide geotechnical report in areas of known high water table. (201-4)

7. Provide geotechnical report if adverse site conditions are found or suspected. (203)

8. Provide site-drainage plan complying with CABO R301.3 or local requirements. (301)

9. Provide fill specifications if site is to be prepared with earth fill. (303-2)

10. If a geotechnical report is required, what is the net allowable soil bearing pressure? (202)

11. If no adverse soil conditions are known or suspected, and if the home is individually sited, assume a soil bearing pressure of 1,000 psf. and use this value when a determination of soil bearing pressure is called for.

APPENDIX E
MANUFACTURER'S WORKSHEET

Manufacturer's Company Name: New Homes, Inc.
Address: 39 Peachtree Lane
Atlanta, GA

Telephone: 219/333-1792

Determination of Building Structure and Size

The manufacturer shall provide the following information:

1. Type of unit

2. Method, location and types of support:
   Refer to Figures 6-7 and 6-8 and Section 601-4.
   Is the home a C, E, or I?

3. Length of unit L

4. Actual width of unit Wt

5. Height of exterior wall **

6. Height of roof peak **

7. Roof slope **

8. Self weight of total unit (W) including mechanical equipment **

9. Distance between chassis members

10. One foundation design concept (See Appendix A)
    (C1-C4; E1-E8; or I)

   C
   56'0" ft.
   13'8" ft.
   7'6" ft.
   2.28' ft.
   4 in 12
   16,452 lbs.
   82.0" ft.
   C1
11. Recommended pier spacing **

a. Exterior

b. Interior

c. Continuous Marriage Wall

Length of largest isolated marriage wall opening or average of largest two adjacent openings

d. Tie-down Strap (C1 concept only) \( \frac{7}{\text{(Number)}} \) ft.

12. One installation method recommendations (include documentation showing connection details pertinent to geographic area for seismic or wind). **

13. Interior shear wall locations (include documentation showing locations). **

14. Design wind speed used in designing connection details for horizontal anchorage (Ah) and vertical anchorage (Av) in the transverse direction. **

15. Seismic acceleration values used in designing connection details for horizontal anchorage (Ah) in the transverse and longitudinal directions. **

16. Shear wall connection details with rated capacity for wind and seismic are provided. ** †

a. Connection locations at foundation end and interior walls shown? **

b. Rated connection capacity for uplift and overturning **

c. Rated connection capacity for sliding in transverse direction **

d. Rated connection capacity for sliding in longitudinal direction **

e. Vertical X-bracing tension strap capacity **

\( \Delta a \) 0.05

\( \text{yes} \) no

\( \text{yes} \) no

3,150 lbs./ft (or lbs./tie-down)

4,800 lbs./ft (or lbs./diag. strap)

4,800 lbs./ft

5,600 lbs./diag. strap
f. Engineering calculation by licensed structural engineer? **

** Optional values: It is optional for the manufacturer to provide these values. If the manufacturer does not provide the values, it is the responsibility of the owner to supply values, based on engineering analysis by a licensed structural engineer.

† Item 16 is provided in California.
APPENDIX F
DESIGN WORKSHEET

Owner's Name: John Smith
Address: 35 Brandywine, Tampa, FL
Builder's Name: 
Site Location: Tampa, FL

PART 1: SITE CONDITIONS
(Accompanies Chapter 2)

1. Has the Manufacturer's Worksheet been provided? yes no

Existing Grade Elevation (201-1)

2. Does the site require a survey? (Answer yes if: 1) elev. to be altered by grade or fill; 2) site near flood zone; 3) subdivision. Answer no if individually-sited with no alteration of building site.) yes no

3. If yes to above, what is the surveyed existing elevation? 28 ft.

Flood Protection Elevation (201-2)

4. Is the building site in a flood zone? (If yes to 4, then answer 5, 6, & 7. If no, skip to 9.) yes no

5. What is the Base Flood Elevation or the Flood Protection Elevation (use highest value)? ft.

6. Is the site to be graded, filled, or bermed? (If no, skip to 9.) yes no

7. If yes to 6, have all permits been provided? yes no

8. If no to 6, then are the buildings to be built on elevated foundations? (If yes, this handbook cannot be used. Refer to FEMA Manual.) yes no
Frost Penetration Depth (201-3)

9. What is the maximum frost penetration depth?  
   (see Appendix H, page II-4)  
   ___0__ in.

10a. Does foundation plan show base of footing extending below frost penetration depth?  
     (If yes proceed; if no, applicant should revise plans.)  
     yes no

10b. Does foundation plan show base of footing extending below topsoil layer (min. 12") to undisturbed soil?  
     yes no

Ground Water Table Elevation (201-4)

11. For subdivisions, does a Geotechnical Engineer recommend drainage of subsurface water?  
     (If no, skip to 13.)  
     yes no

12. Has groundwater drainage plan been provided?  
     yes no

Soil Conditions (202, 203)

13. If any of the following adverse site conditions are discovered, specific recommendations by a Geotechnical Engineer will be required (applies to subdivisions and individually-sited homes.)

   Organic soil (8" topsoil layer)  
     yes no

   Expansive (shrink-swell) soil  
     yes no

   Sloping site  
     yes no

   Subsidence  
     yes no

   (Applicant may be referred to Geotechnical Engineer if any of the above are yes. If no, to all of above, move to next step.)

14. Is area in a known termite infestation area?  
     yes no

   Region classification?  
   (See Appendix H, Termite Infestation Map, page H-10)  
   (If no, skip to 16.)

     very heavy

15. Has applicant complied with CABO R-308 or local ordinance for construction procedures and treatment?  
     (If yes, continue; if no, refer applicant to CABO requirements.)  
     yes no
PART 2: SITE PREPARATION
(Accompanies Chapter 3)

16. Acceptable surface drainage plan provided? (301)
   (If no, one must be provided for subdivision)
   \[ \text{Yes} \quad \text{No} \]

17. Grading plan provided? (302)
   \[ \text{Yes} \quad \text{No} \]

18. Fill specifications conforming to those cited in HUD Land Planning Data Sheet (79g)? (303)
   (If fill is used, below the home's foundation, a report by Geotech.
   Eng. should be submitted to provide fill specifications.)
   \[ \text{Yes} \quad \text{No} \]

19. Finish grade elevation? (304)
    (Check answers to Part 1: #4 & #5. The finish grade elevation
    must be higher than #5 if in flood zone.)
    \[ 28' - 0" \]

PART 3: DESIGN LOADS
(Accompanies Chapter 4)

Information from Manufacturer's Worksheet

20. Has all the information been provided on the Manufacturer's
    Worksheet? (Appendix E)
    \[ \text{Yes} \quad \text{No} \]

21. What is the building self weight (W)?
    (Mfg. Wksht. #8)
    \[ 16,452 \text{ lbs.} \]

22. What is the building length (L)?
    (Mfg. Wksht. #3)
    \[ 56' - 0" \text{ ft.} \]

23. What is the distributed weight per foot of unit length? (w=W/L)
    (402-B, C)
    \[ 294 \text{ lbs./ft.} \]

24. What is the building type?
    (Mfg. WkSht. #2)
    \[ \text{Single-Section} \quad \text{Multi-Section} \]

    Foundation design concept?
    (C1, C2, C3, C4, E1, E3, E4, E5, E6, E7, E8, I)
    \[ \text{C1} \]
Dead Load (402-1)

25. What is the light dead load value from Table 4-1?  
   \[(402-1.A.1)\] *(lbs./ft.)*

26. What is the heavy dead load value from Table 4-1?  
   \[(402-1.A.2)\] *(lbs./ft.)*

27. Does the answer from Question #23 fall within the values in #25 and #26?  
   \[(402-1.D)\] 
   (If the answer is yes, continue. If no, the foundation is not within the limits of this document and must be redesigned by a structural engineer.)  
   yes no

Snow Load (402-2) / Minimum Roof Live Load (402-2.C)

28a. What is average annual ground snowfall (Pg)?  
   \[(402-2.C)\] *(lbs./sq.ft.)*

28b. What is 0.7 multiplied by Pg? (Cs=0.74)  
   \[0.0\] psf.

29a. What is the roof slope? (Mfg. Wksht. #7)  
   \[4\] in 12

29b. What is the minimum roof live load for the roof slope?  
   \[15.0\] psf.

30. Record the larger magnitude of item 28b or item 29b. Use this magnitude for roof load where required.  
   \[15.0\] psf.

Wind Load (402-3)

31a. What is the basic wind speed (V)?  
   \[100\] mph.

31b. If V is less than 80 mph, record MPS min. 80 mph for wind design.  
   \[100\] mph.

32. Is the site inland or coastal?  
   \[Coastal\]
   (If inland, skip to question #38.)

33. If a coastal area, has the manufacturer provided connection details?  
   \[yes\] no
34. If yes to #33, what design wind speed has the manufacturer used in designing connection details?  
(Mfg. Wksht. #14)  
120 mph.

35. Are the connection locations shown? (Mfg. Wksht. #16a)  
Yes  
No

36. Are connection details provided for foundation shear walls?  
(For an answer of yes, all questions under Mfg. Wksht #16 must be answered satisfactorily.)  
Yes  
No

37. Is the value for Question 34 equal to or greater than the number given in Question 31?  
(If yes, proceed. If no, return design to manufacturer for clarification.)  
Yes  
No

Seismic Load

38a. What are the seismic acceleration values?  
(See Seismic maps, pages H-15 and H-16)  
Aa 0.05  
Av 0.05  
*

38b. Is $A_v < 0.15$?  
(If no, proceed. If yes, seismic need not be considered, skip questions 39 to 41.)  
Yes  
No

(See H-300 for Special Requirements of Foundation Design.)  
B

30. What is the applicant's proposed design concept?  
(Design Wksht. #24)  
C1  
*

41. Do the Foundation Design Concept Tables approve the foundation system for use in seismic areas of Question #38 above?  
(See Appendix A)  
(If yes, proceed. If no, return to applicant for foundation design choice more suited to high seismic areas.)  
Yes  
No

PART 4: FINAL DESIGN PROCEDURE  
(Accompanies Chapter 6)

42. What is the actual building width?  
(Mfg. Wksht. #4)  
13'-8"  
ft.
43. The nominal building width to be used in the Foundation Design Tables, (Aftg, Av & Ah) is Wt:
   (600-2.A and Figure 6-1)  
   __14'-0"__  ft.

44. Where are the foundation supports located? Check drawings submitted by the owner and Foundation Design Concepts in Appendix A. Circle the support locations shown on the Manufacturer's foundation concept plan.
   Chassis Beams
   Exterior Walls
   Marriage Wall

45. Do these locations match the Foundation Concept shown in Appendix A? Do the locations match Question #24 on the Design Worksheet?
   (If yes, proceed. If no, return to Owner for clarification.)
   yes  no

46. Is Vertical Anchorage present?
   yes  no

APPENDIX A

47. What is the basic system type?
   (From Part 3: #24; Mfg. Wksht. #2)  
   C1  *

48. What is the spacing between piers?
   (Mfg. Wksht. #11)
   (602-2)
   Exterior:  5.53'
   Interior:  5.53'

   Continuous Marriage Wall:

   Largest or Average Marriage Wall Opening:  ft.
   Tie Down (C1)  8'-8"  ft.

APPENDIX B

Required Footing Size

49. The required Exterior Wall Footing, for the foundation type, is found in the Required Effective Footing Area table in App. B, Part 1. (Use maximum value from item #30.)
   C1  *

   The Required Exterior Square Footing size is:
   Type C  3.6  sq.ft.
   Type E or 1  (width)  ft.
50. The Required Interior Footing area is:
   (Also exterior piers for foundation type E)
   __________ sq.ft.

51a. The Required Continuous Marriage Wall Footing area is:
   __________ sq.ft.

51b. The Required Footing area under posts at the ends of marriage
   wall opening(s) is:
   __________ sq.ft.

**Vertical Anchorage Requirements in the Transverse Direction (602-4)**

   Exterior Av 2,565 *
   (lbs./pier spacing;
   lbs./ft. for E type;
   lbs./tie-down spacing)

52b. Number of vertical tie-down locations for multi-section units:
   2 or 4 or 6

52c. For units with additional vertical anchorage at the interior piers,
   determine the Required Vertical Anchorage.
   Interior Av __________ *
   (lbs./int. pier spacing)

53. What is the manufacturer-supplied value?
   (#16b, Mfg. WkSht.)

54. Is this value (#53) greater than the value given in #52a?
   (If yes, continue. If no, return to owner for clarification.)
   yes  no

**Horizontal Anchorage Requirements In The Transverse Direction (602-5)**

55a. What number of transverse foundation walls
   was selected? (602-5.E) (If vertical X-bracing
   planes are used, complete items #55a, #56 and
   #57 for 2 transverse walls, and then skip to
   item #59.)

55b. Are diagonal ties used to complete the top of
   the transverse short wall for horizontal anchorage? (602-5.G.1)

   Estimate height (h) for appropriate illustration
   in Figure 6-10.

End Wall Ah | Int Wall Ah
-------------|-------------
858 lbs./ft  | 4,800 lbs./ft

57a. What is the manufacturer's supplied rated capacity for sliding? (#16c, Mfg. WkSht.)

57b. If answer to item #55b is yes, record manufacturer or product supplier rated strap tension capacity.

58a. Is value #57a greater than item #56?
If yes, continue. If no, return to section 602-4.C and to question #55a and select a larger number of transverse foundation walls. If the maximum number selected (6) does not work, return to owner (who may wish to contact the manufacturer for clarification).

</table>
c. Required horizontal anchorage (C) value, based on formula. (602-5.G.2.c)

d. Estimated height (h) in Figure 6-10.

e. Tension (T) required. (602-5.G.2.d)

60. What is the manufacturer-supplied rated strap tension capacity? (#16, Mfg. WkShl.) (or capacity defined by literature supplied by product supplier)

61a. Is value #57 greater than value #59c?  
If yes, continue. If no, return to Section 602-5.G and to question #59 and select a greater number of X-brace locations as a next trial. Repeat until answer is yes, then continue.

61b. Is value #60 greater than value #59c?  
If yes, continue. If no, return to section 602-5.G and to question #59 and select a greater number of X-bracing locations. If the maximum number selected does not work, return to owner (who may wish to contact the manufacturer for clarification or product supplier for clarification).

**Horizontal Anchorage Requirements In The Longitudinal Direction (602-6)**

62a. Using the tables, find the required horizontal anchorage (Ah) in the longitudinal direction. (Appendix B, Part 4) (602-6.E)

62b. If using vertical X-bracing planes (and the formulas in section 602-6.F) determine anchorage value for X-bracing planes. (If using exterior long walls, skip to item #63.)

1. Number of chassis beam lines used for vertical X-bracing planes.
Number of X-bracing planes proposed under each chassis beam along the length of the unit.

2. Horizontal anchorage (B) required force, based on formula.

3. Assumed height (h-b) based on Figure 6-11.

4. Tension (T_L) based on formula.
   (602-6.F.(3))

63. What is the manufacturer-supplied value for horizontal anchorage? (#16d, Mfg. WkSht.)

64a. For shear walls: is value #63 greater than #62a?
    If yes, skip to item #67. If no, contact owner for clarification.

64b. For X-bracing: is value #63 greater than value #62b.2?
    If yes, return to item #62b.3. If no, increase number of vertical X-bracing planes and repeat items 62b.1 and 62b.2 until answer is yes. For multi-section units consider 4 lines of vertical X-bracing under all chassis beams.

65. What is the manufacturer-supplied rated strap tension?
    (#16e, Mfg. WkSht. or product supplier)

66. Is value #65 greater than #62b.4?
    If yes, continue. If no, contact owner to obtain straps with greater capacity, or return to item #62b.1 and increase the number of vertical X-bracing planes until answer is yes.

APPENDIX C

Withdrawal Resistance Verification (603-2.2)

67. Using Appendix C, Table C-1 or C-2, verify that the foundation system will resist withdrawal. Answer question #67a for type E. Answer question #67b for types C, I, or type E with interior pier anchorage.
a. *Withdrawal Resistance for long foundation wall.* (Type E)
Circle the type of material that is to be used.

1) Using Table C-1, which capacity is greater than required 
   Av? (603-2.B.(1)) (#52a)

2) Using Table C-1, what is the height of the wall + footing 
   for required withdrawal resistance? (hw + 6")

3) What is the height of the wall + footing for frost protec- 
   tion? (frost depth (#9) + 12")

4) What is the greatest height #67a.2 or #67a.3?
   Circle the height which controls.

5) Record the bottom of footing depth from grade. 
   (Item #67a.4 - 12")

6) Using Table C-1, what is the required width of the wall 
   footing for withdrawal?

7) Is item #67a.6 greater than or equal to item #49? 
   If yes, continue. If no, change footing width to item #49.

8) Record design exterior wall footing width.

b. *Withdrawal Resistance for Piers.* (Types C, C1 
   (concrete dead-man), I or type E with interior pier 
   anchorage - multi-section units.)

Circle pier type:

Reinforced Concrete
Masonry-Fully Grouted
Masonry-Grouted @ 48" o.c.
All-Weather Wood / Footing

________________________ lbs./ft.
________________________ in.
________________________ in.
________________________ in.
Withdrawal Frost Depth
________________________ in.
________________________ in.
________________________ in.
yes no
________________________ in.

---

**Diagram:**

![Diagram](image-url)

Reinforced Concrete
Reinforced Masonry - fully grouted
Reinforced Concrete Dead-man
1) Using Table C-2, which capacity is greater than required A_v? (#52a and #52c) (603-2.B.(2))

   Exterior   Interior (when used)
   2,824       lbs./pi

2) Using Table C-2, what is the height of the pier + footing for required withdrawal resistance? (hp + 8")

   40"        in. *

3) What is the required height of pier + footing for frost protection? (frost depth (#9) + 12")

   in.

4) What is the greatest height #67b.2 or #67b.3?

   40"        in.

Circle the height which controls.

Withdrawal Frost Depth 

5) Record the bottom of footing depth from grade. (Item #67b.4 - 12")

   in.

6) Using Table C-2, what is the required width of the square footing if withdrawal resistance controls or if frost depth controls?

   36"        in. *

c. *Frost depth for marriage walls.* What is the required depth of footing below grade for frost protection? (frost depth (#9))

   0        in.

Vertical Anchorage and Reinforcement for Longitudinal Foundation Walls and Piers (603-2.D)

68. Using Appendix C, Table C-3, C-4A or C-4B, verify that the foundation anchors will resist uplift. Answer question #68a for type E. Answer question #68b for types C, I, or type E with interior pier anchorage.

1) Using Table C-4A (concrete & masonry), which capacity is greater than the required A_v? (#52a, Design Wksht.) If treated wood wall, skip to item #68a.3.

   lbs./lineal ft. of wall
Circle correct washer choice for the capacity selected

Standard Washer
Oversized Washer

2) Using Table C-4A (masonry and concrete):
   a) Required anchor bolt diameter
      __________ in.
   b) Required anchor bolt spacing
      __________ in.
   c) Using Table C-3A:
      (1) Rebar size
          __________ *
      (2) Lap splice
          __________ in.
      (3) Rebar hook length
          __________ in.

3) Using Table C-4B (wood), which capacity is greater than
   the required Ay? (#52a, Design Wksht.)
   If using concrete or masonry wall, skip to item #68b.
   lbs./linear ft. of wall

4) Using Table C-4B (wood):
   a) Required nailing
      __________ *
   b) Minimum plywood thickness
      __________ in.
   c) Required anchor bolt diameter
      __________ in.
   d) Required anchor bolt spacing
      __________ in.

b. Vertical Anchor Capacity for Piers
   (Types C, I, or type E with interior pier anchorage)
   (603-2.D.1)

<table>
<thead>
<tr>
<th>Exterior</th>
<th>Interior</th>
</tr>
</thead>
<tbody>
<tr>
<td>(when used for anchorage in multi-section units)</td>
<td></td>
</tr>
</tbody>
</table>

1) Using Table C-3, which capacity in the table is
   greater than the required Ay?
   (From #52a, Design Wksht.)
   __________   __________ lbs./pie
2) Using Table C-3:
   a) Number of anchor bolts
      Exterior: 1 or 2  
      Interior: 1 or 2
   b) Anchor diameter
      Exterior: 1/2" or 5/8"  
      Interior: 1/2" or 5/8"

3) Using Table C-3A:
   a) Rebar size
      Exterior: #4 or #5  
      Interior: #4 or #5
   b) Lap splice
      Exterior: __________ in.  
      Interior: __________ in.
   c) Rebar hook length
      Exterior: __________ in.  
      Interior: __________ in.

**Horizontal Anchorage and Reinforcement for Transverse Foundation Walls (603-3)**

69. Using Appendix C, Table C-5A or C-5B, verify that the foundation anchorage will resist sliding at the transverse end foundation walls. Use for types C, E, or I.

   a. **For continuous foundations.**

   Using Table C-5A (concrete & masonry) or C-5B (wood), which capacity is greater than the required (Ah) (603-3) (item #56)?

      Exterior: __________  
      Interior: __________ lbs./l

   1) Using Table C-5A, find:

      a) Required anchor bolt diameter
      Exterior: __________ in.  
      Interior: __________ in.

      b) Required anchor bolt spacing
      Exterior: __________ in.  
      Interior: __________ in.

      c) Using Table C-3A:

         (1) Rebar size
         Exterior: __________  
         Interior: __________ *

         (2) Lap splice
         Exterior: __________ in.  
         Interior: __________ in.

         (3) Rebar hook length
         Exterior: __________ in.  
         Interior: __________ in.

   2) Using Table C-5B, find:

      a) Required nailing
      Exterior: __________  
      Interior: __________ *

      * Use if the required nailing is greater than the specific requirement.
b. For short foundation walls completed with diagonal braces. (603-5)

Using Appendix C, Table C-5A, verify the diagonal anchorage capacity to the short foundation wall.

1) Record the required horizontal force \((Ah \times Wt)\) from 602-5.G.1.a and item #56.

\[
\begin{array}{ll}
\text{End} & \text{Interior} \\
\hline
\text{lbs.} \\
\end{array}
\]

2) Table C-5A capacity for one 1/2” diameter bolt at 12” o.c.

\[
\begin{array}{ll}
1800 & 1800 \\
\hline \\
\text{lbs.} \\
\end{array}
\]

3) Number of bolts \((Ah \times Wt = 1800; \text{one minimum})\) at concrete or masonry top of short wall.

\[
\begin{array}{ll}
\text{End} & \text{Interior} \\
\hline
\text{number} & \text{number} \\
\text{*} \\
\end{array}
\]

4) Size of anchor bolts

\[
\begin{array}{ll}
\text{in.} \\
\end{array}
\]

5) Using Table C-3A:
   a) Rebar size

\[
\begin{array}{ll}
\text{in.} \\
\text{*} \\
\end{array}
\]
   b) Lap splice

\[
\begin{array}{ll}
\text{in.} \\
\end{array}
\]
   c) Rebar hook length

\[
\begin{array}{ll}
\text{in.} \\
\end{array}
\]

c. For vertical X-bracing planes in the transverse direction. (603-6)

Using Appendix C, Table C-5A, verify the diagonal anchorage to the pier footings and the tension capacity of the diagonals.

1) Record the required horizontal force \((C)\) from item #59c.

\[
4,637 \text{ lbs.}
\]

2) Table C-5A capacity for one 1/2” diameter bolt at 12” o.c.

\[
1800 \text{ lbs.}
\]
3) Number of bolts (C + 1800; one minimum) at top of a footing.  
   3  *  

4) Record the required tension force (T_{i}) from item #59e.  
   5,373  lbs./dia  

5) Select tension strap capacity greater than or equal to T_{i} from owner's product supplier or manufacturer's supplied capacity (item #60).  
   5,600  lbs./dia  

6) Record diagonal strap data  

A36 galv. steel plate: 1/4" x  

**Horizontal Anchorage for Longitudinal Foundation Walls (603-4)**

70. Using Appendix C, Table C-5A or C-5B, verify that the foundation horizontal anchorage will resist sliding at the long foundation walls. Use for types C, E and I.

a. **For continuous exterior foundation walls.**

Using Table C-5A (concrete and masonry) or Table C-5B (wood), which capacity is greater than the required exterior Ah? (602-6.E) (item #62a)

lfs./ft.  

1) Using Table C-5A, find:
   a) Required anchor bolt diameter  
      ___________  in.  
   b) Required anchor bolt spacing  
      ___________  in.  
   c) Using Table C-3A:
      (1) Rebar size  
         ___________  *  
      (2) Lap splice  
         ___________  in.  
      (3) Rebar hook length  
         ___________  in.  

2) Using Table C-5B, find:
   a) Required nailing  
      ___________  *  
   b) Minimum plywood thickness  
      ___________  in.  
   c) Required anchor bolt diameter  
      ___________  in.  
   d) Required anchor bolt spacing  
      ___________  in.  
b. *For vertical X-bracing planes.*
(603-6.A.(2))

Using Appendix C, Table C-5A, verify the diagonal anchorage to the pier footings and the tension capacity of the diagonals.

1) Record the required horizontal force (B) from item #62b.2.
   \[ \text{1,293 lbs.} \]

2) Table C-5A capacity for one 1/2” diameter bolt at 12” o.c.
   \[ \text{1,800 lbs.} \]

3) Number of bolts (B ÷ 1800; one minimum)
   \[ 1 \]

4) Record the required tension force (T₁) from item #62b.4.
   \[ \text{1,471 lbs./diag.} \]

5) Select tension strap capacity greater than or equal to T₁
   from owner's product supplier or manufacturer's supplied capacity (item #60).
   \[ \text{5,600 lbs./diag.} \]

6) Record diagonal strap data

   **SUMMARY SHEET**
   (Accompanies Chapter 7)

   A36 Galv. Steel Plate: 1/4" x 1

71. Compare values from preceding questions.
Select the largest value.

**a. Bearing area and vertical anchorage**

1. *Pier footings: types C, E & I.*

<table>
<thead>
<tr>
<th>Piers</th>
<th>Exterior</th>
<th>Interior</th>
<th>Marriage Wall Cont.</th>
<th>At Post</th>
</tr>
</thead>
</table>

   Required Effective Footing Area from questions #49, #50, & #51.

   Required footing area to resist withdrawal due to uplift from Question #67. (for single-section or 2 tie-down system, only the exterior piers resist uplift, for 4 tie-down only the interior piers and exterior walls resist uplift)

   \[ 9.0 \text{ sq.ft.} \]
### Piers

<table>
<thead>
<tr>
<th>Pier Footing Sizes (largest of above)</th>
<th>Marriage Wall Cont.</th>
<th>At Post</th>
</tr>
</thead>
<tbody>
<tr>
<td>3.6 sq. ft.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**“Dead-man” footing size.**

9.0 sq.ft.

#### Reinforcing for pier footings:

Bring forward answers from previous questions. (#68b)

(Types C, I, or E with interior pier anchorage.)

<table>
<thead>
<tr>
<th>Exterior</th>
<th>Interior</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

- Number of anchor bolts
- Anchor bolt diameter
- Rebar size
- Lap splice
- Rebar hook length

<table>
<thead>
<tr>
<th>Exterior</th>
<th>Interior</th>
<th>Marriage Wall</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

- Footing depth: grade to bottom of footing
- Pier footing and “dead-man” footing reinforcing bars: #4 at 10" o.c.
- “Dead-man” footing depth: grade to bottom of footing

2. **Long Foundation wall footing: type E or I:**

**Required Effective Footing Width**

- Required Footing Width for soil bearing (#49) in.
- Required Footing Width to resist uplift withdrawal (#67a.6) ft.

**Wall Footing Size (largest of above)**

ft.

**Footing Depth: Grade to bottom of footing (#67a.5)**

in.
Footing reinforcing bars.

Reinforcing for longitudinal foundation walls: Record answers from item #68a and record sizes and spacings.

From 68a.2: masonry and concrete:

Required anchor bolt diameter

Required washer size

Required anchor bolt spacing

Rebar size

Lap splice

Rebar hook length

From 68a.4: wood: Record answers from item #68a.4 and record sizes and spacings.

Required railing

Minimum plywood thickness.

Required anchor bolt diameter

Required anchor bolt spacing

b. Horizontal anchorage in the transverse direction - foundation walls

1. Continuous foundation walls (#69a)

Number of transverse foundation walls (#55a)

Required Footing Width (minimum)

From #69a.1: concrete / masonry:

Anchor bolt diameter
<table>
<thead>
<tr>
<th></th>
<th>End Wall</th>
<th>Interior Wall</th>
</tr>
</thead>
<tbody>
<tr>
<td>Anchor bolt spacing</td>
<td></td>
<td></td>
</tr>

<tr>
<td>Rebar hook length</td>
<td></td>
<td>i</td>
</tr>
</tbody>
</table>

3. For vertical X-bracing planes in lieu of short walls. (#69c)

|                        |     |
| Number of X-brace locations (#59) | 6    |
Spacing of vertical X-brace planes (#59) 11.07' ft.

Items from #69c.1 and #69c.5

Required anchor bolt diameter 1/2" in.

Number of bolts at top of footing to connect diagonal 3

Diagonal strap size A36 galv. steel plate: 1/4" x 1

Connection to top flange of chassis beam (describe) ________________

c. Horizontal anchorage in the longitudinal direction - exterior foundation walls

1. Continuous foundation walls

Reinforcing for longitudinal foundation walls: record only if larger sizes or closer spacing than recorded for vertical anchorage (#71a.2).

From #70a.1: concrete / masonry:

Anchor bolt diameter ___________ in.

Anchor bolt spacing ___________ in.

Rebar size ___________

Lap splice ___________ in.

Rebar hook length ___________ in.

From #70a.2: wood: record only if larger sizes or closer spacings than recorded for vertical anchorage (#71a.2)

Required nailing ___________

Minimum plywood nailer ___________

Anchor bolt diameter ___________

Anchor bolt spacing ___________ in.
2. **Vertical X-bracing planes under chassis beam lines**

   (#70b.)

   - Number of X-brace locations along one chassis beam line: 2
   - Spacing of X-brace locations along one chassis beam line: ft.
   - Required anchor bolt diameter: 1/2" in.
   - Number of bolts at top of footing at connection to the diagonal: 1
   - Diagonal strap size: A36 Galv. Steel Plate: 1/4"
   - Connection to bottom flange of chassis beam (describe): 

72. Do foundation dimensions and details comply with Foundation Capacities Table, based on Foundation Design Table Values?

   - yes
   - no

73. If #72 yes, approve. If no, return to applicant.
