Important Safety Instructions

This symbol indicates that dangerous voltage constituting a risk of electric shock is present within your portable air conditioner.

This symbol indicates that there are important operating and maintenance instructions in the literature accompanying your portable air conditioner.

WARNING

- 1 Read these instructions.
- 2 Keep these instructions.
- 3 Heed all warnings.
- 4 Follow all instructions.

- 7 Do not block any ventilation openings. Install in accordance with the manufacturer's instructions.
- 8 Do not install near any heat sources such as radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat.
- 9 Do not defeat the safety purpose of the polarized or grounding-type plug. A polarized plug has two blades with one wider than the other. A grounding type plug has two blades and a third grounding prong. The wide blade or the third prong are provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.
- 10 Protect the power cord from being walked on or pinched particularly at plugs, convenience receptacles, and the point where they exit from the machine.
- 11 Do not attempt to modify or extend the power cord of this machine.
- 12 Unplug this machine during lightning storms or when it will not be used for long periods of time.
- 13 Make sure that the available AC power matches the voltage requirements of this machine.

- 14** Do not handle the plug with wet hands. This could result in an electric shock.
- 15** Unplug the power cord by holding the plug, never by pulling the cord.
- 16** Do not turn the machine on or off by plugging or unplugging the power cord.
- 17** Turn off the machine before unplugging it.
- 18** Refer all servicing to qualified service personnel. Servicing is required when the machine has been damaged in any way, such as power-supply cord or plug is damaged, liquid has been spilled or objects have fallen into the machine, the machine has been exposed to rain or moisture, does not operate normally, or has been dropped.
- 19** To reduce the risk of fire or electric shock, do not expose this machine to rain, moisture, dripping, or splashing, and no objects filled with liquids should be placed on top of it.
- 20** Batteries should not be exposed to excessive heat such as sunshine, fire, or the like.

Caution

Danger of explosion if battery is incorrectly replaced. Replace only with the same or equivalent type.

Additional precautions

- This machine is intended for household use. Do not use for any other purpose.
- Use this machine indoors in a dry location only. Do not use it outdoors.
- Do not place heavy objects on the machine, as this could damage the machine.
- Wipe the machine with a soft cloth to clean it. Do not use wax, thinner, or irritating detergents.
- Do not allow children or pets to drink the water discharged by the machine.
- Do not disassemble or attempt to repair the machine yourself.
- Do not plug this machine into an outlet with several other high electrical usage appliances.
- Keep the machine away from heat sources and avoid direct sunlight.
- If the machine is making a loud noise or producing an odor or smoke, switch off it, disconnect the plug, and immediately try to determine the cause.
- Do not place heavy objects on the power cord to avoid it being crushed and causing an electric shock.
- Do not put your fingers or hard objects into the outlet air guide bars.
- Turn the machine off and unplug it if there is water inside the machine, then contact qualified service personnel for servicing.

- Turn the machine off and unplug it before cleaning, moving, or servicing it.
- To avoid injury, do not allow children or other individuals with special needs to touch or operate the machine. The machine should only be used with adult supervision.
- Place the air conditioner on a flat surface and upright to ensure the normal operation of the compressor.
- Do not use the machine near gasoline or other flammable liquids.
- Do not use aerosol sprays or other solvents near the machine. This may cause plastic deformation or possibly damage the electrical components of the machine.

WARNING

Electric Shock Hazard

Failure to follow these instructions can result in electric shock, fire, or death.

- **This unit must be properly grounded.**
- **Do not, under any circumstances, cut or remove the grounding plug.**
- **If you do not have a properly grounded AC outlet, or if there is any doubt that the outlet is not properly grounded, a qualified electrician should check the outlet and circuit and, if necessary, install a properly grounded outlet.**
- **This air conditioner must be plugged into a grounded 115V, 60 Hz AC outlet, protected by a 15 amp time-delay fuse or circuit breaker.**
- **This air conditioner must be installed in accordance with national wiring codes.**
- **Do not alter or modify the plug or cord of this air conditioner.** If the power cord becomes worn or damaged, the cord should only be replaced by a qualified service technician using genuine replacement parts.
- **Do not use an extension cord.**

Electrical Safety

Integrated circuit breaker

For additional safety, the power cord on this air conditioner features an integrated circuit breaker. You can test and reset the circuit breaker using the buttons provided on the plug case.

The circuit breaker should be tested periodically by pressing the **TEST** button then the **RESET** button. If the **TEST** button does not cause the circuit breaker to trip, or if the **RESET** button will not stay engaged, unplug the air conditioner immediately and contact an Insignia technician.

Preferred grounding method

Temporary grounding

Due to potential safety hazards, we strongly discourage the use of an adapter plug. If an adapter plug must be used for a temporary connection, use only a UL-listed adapter with a minimum capacity of 120V~60Hz, 13A and 1560W (for 10,000 BTU unit) or 15A and 1800W (for 12,000 BTU unit). Make sure that the large slot of the adapter is aligned with the large slot in the outlet.

To prevent damage to the adapter's ground terminal, hold the adapter in place while plugging or unplugging the air conditioner.

Attaching the adapter ground terminal to the wall receptacle cover screw does not ground the appliance unless the cover screw is metal and not insulated and the wall receptacle is grounded through the house wiring.

Frequent connection and disconnection can damage the ground terminal on the adapter. Never use a broken or damaged adapter.

Setting up your portable air conditioner

Remove and store (optional) packing materials for reuse. Remove any shipping tape before using the air conditioner. Remove tape residue with liquid dish soap and a damp cloth. Do not use sharp tools, alcohol, thinners, or abrasive cleaners to remove adhesive, which could damage the finish.

Note

- Do not remain in the direct airflow from the air conditioner for extended periods.
- When used at the same time as stoves, fireplaces, or other combustion/heating devices, make sure that there is sufficient flow of fresh air into the room. Do not use in tightly closed spaces with these types of devices.
- This air conditioner is intended for household use as a consumer comfort appliance. Do not use it as a precision climate control system for the purpose of cooling precision equipment, food, pets, plants, artwork, and so on. Such items could be damaged.
- Do not bend the hose downward when the window installation kit is not being used. Doing so may cause inferior performance or failure of the air conditioner.

Placing your air conditioner

Place the unit on a flat, dry area near a window, so you can use the hose and adapter to connect the air conditioner to the window installation kit in order to vent the exhaust air outside.

To maintain good air circulation and optimum machine performance, leave a 20 in. (50 cm) space around it.

Installing your air conditioner

- 1 Screw the exhaust hose with adapter to the air outlet on the back of your air conditioner.

- 2 Measure the window size.

- 3 Install the window sealing plate in the window opening, adjust the length to fit the window opening and secure it with screw A (provided).

- 4** Insert the hose adapter into the vent panel, then slide it down/left until it clicks into place.

- 5 If desired, secure the hose adapter to the vent panel with a type B screw.

- For optimum performance, do not twist the venting hose. For better efficiency, shorten the hose, if possible.

Caution

The exhaust duct is designed especially for this air conditioner. Replacing or lengthening the duct could result in damage to your unit.

- 6 If desired, Install the security bracket with the type C screw.

Attaching a drain hose for DRY mode operation (optional)

Notes

The illustrations used in the following procedure may not show your exact air conditioner unit, but are included to illustrate the procedure.

If you run your air conditioner continually in DRY mode because of high humidity or other reasons, the water collection tank should drain continuously. To accomplish this:

- 1 Unplug your air conditioner and move it to a location where you can work on it.
- 2 Remove the rubber plug from the unit.

- 3 Remove the filter case.
- 4 Install a 0.47 in. (12 mm) inside diameter drain hose (not provided) on the back of the unit where you removed the water plug. Use a hose clamp (not provided) to make sure that there are no leaks.
- 5 Replace the filter case.

- 6 Place the open end of the hose in a suitable location to drain continuously.

Indoor drain

Outdoor drain

- 7 Plug in your air conditioner and restart it.
- 8 Set your air conditioner to DRY mode using either the remote control or the control panel.

Using your portable air conditioner

Inserting the batteries in the remote control

- 1 Press down on the arrow on the back of the remote control, then slide the battery compartment cover from the battery compartment.

Make sure that you orient the batteries correctly (+ and -) when you install them.

- 2 Insert two AAA batteries (provided) into the battery compartment. Note the proper orientation of the + and - polarity of the batteries.
- 3 Reinstall the battery compartment cover, making sure the tab locks into place.

Notes

- Use only carbon-zinc or alkaline batteries. Do not use rechargeable batteries.
- When you replace the batteries, always replace them with new batteries. Do not mix old and new batteries.
- If your air conditioner will not be used for an extended period of time, remove the batteries from the remote control.

Cautions

- If the fluid from inside the batteries comes into contact with your skin or clothes, wash immediately with clean water.
- Do not use the remote control if the batteries are leaking.
- If the fluid from inside the batteries gets into your mouth or eyes, flush immediately with clean water and contact a doctor for treatment.

Using the air conditioner

You can control your air conditioner by using the control panel on the front of the unit, or by using the remote control. If using the remote control, always point it at the air conditioner.

Button	Description
	<p>Press to turn your air conditioner on or off.</p> <p>When you turn the air conditioner on, you will hear a tone and the air discharge automatically opens. The display shows the set temperature and the current mode.</p> <p>When you turn your air conditioner off, you will hear a tone and the air discharge closes. Control settings, such as Mode, Set Temperature, Auto Swing, and so on, are retained in memory when the power is off (unless the unit has been unplugged).</p>
	<p>Press to cycle through the operating modes (COOL, FAN, DRY, or AUTO). The LED next to the Mode button displays the active mode. The default mode is COOL.</p> <p>COOL—The compressor runs and cools the room. Use the ▲ or ▼ and SPEED buttons to set the desired temperature and fan speed.</p> <p>FAN—The fan circulates the air, but the compressor does not run to cool it. Use the SPEED button to set the desired fan speed.</p> <p>DRY—The fan and dehumidifier both run to remove humidity from the air. After the set temperature is reached, the compressor and fan turn off. The fan speed is preset and cannot be adjusted. We suggest that you use a drain hose in dry mode.</p> <p>AUTO—In auto mode, the air conditioner function is determined by the ambient temperature. If the temperature is higher than 77° F(25° C), the air conditioner runs in cooling mode. If lower than 77° F(25° C), the air conditioner runs in fan mode.</p>
	<p>Cycles through the available fan speeds. The LED next to the Speed button displays the fan speed. The speed can be selected in either the COOL or FAN modes.</p>

Troubleshooting

Caution

Do not try to repair your portable air conditioner yourself. Doing so invalidates the warranty.

Problem	Possible cause	Possible solution
Air conditioner does not start	The air conditioner is unplugged.	Make sure that the air conditioner is plugged in and that the plug is pushed completely into the outlet.
	The fuse on the circuit is blown or the circuit breaker is tripped.	Check the house fuse/circuit breaker box and replace the fuse or reset the circuit breaker.
	Power failure.	If a power failure occurs, the air conditioner turns off. When the power is restored, wait three minutes to restart the air conditioner to prevent tripping the compressor overload.
	The current interrupter device in the power cord has tripped.	Press the RESET button located on the power cord plug. If the RESET button will not stay engaged, discontinue use of the air conditioner and contact a qualified service technician.
	FL appears on the display.	The water collection tank is full and must be drained. Drain the tank and reset your settings. See “Emptying the water collection tank” on page 27.
	Room temperature is less than the set temperature.	This is normal. The air conditioner automatically shuts off when the room temperature equals, or is less than, the set temperature. Adjust the temperature setting, if needed.

Problem	Possible cause	Possible solution
The air conditioner does not cool	Airflow is restricted.	Make sure that there are no curtains, blinds, or furniture blocking the front of the air conditioner.
	The temperature control may not be set correctly	In COOL mode, decrease the temperature setting by pressing the ▼ button on the panel or the remote control.
	The air filter is dirty.	Clean the filter at least every two weeks. See “Cleaning and maintaining your air conditioner” on page 25.
	The room may have been hot.	You need to allow time for the room to cool down after you first turn on the air conditioner.
	The exhaust hose is not connected or is blocked.	Connect the exhaust hose and make sure that it is not obstructed and is functioning properly.
The air conditioner is freezing up	The cooling coils are iced over.	Ice may block the air flow and obstruct the air conditioner from properly cooling the room. Set the mode control to High Fan or High Cool .
The air conditioner runs too often or too long	The area to be cooled is too large for the air conditioner.	Consult your Insignia technician for the air conditioner capacity required to cool the desired area.
	Doors or windows are open.	Make sure that doors and windows are closed.
The venting hose is hot	When the air conditioner runs continuously for a long time, the hose becomes hot.	This is normal.
The air conditioner is too loud	The unit may seem rather loud for the first two or three minutes of operation.	This is the sound of the compressor starting up and is normal.
	A soft, swishing noise can be heard immediately after turning the unit on or off, and during operation.	This is the sound of the liquid refrigerant flowing in the unit and is normal.
The air conditioner makes an odd noise	An audible gurgling noise may be heard when the unit is operated on a gently sloping floor.	Place the unit on a level floor.

Intelligent error indication

When any of the following error indicators appear on the LED display, turn off your air conditioner and call a professional maintenance technician or service center.

Error code	Description
E1	Coil temperature sensor error.
E2	Indoor temperature sensor error.
E4	Anti-freezing protection. The air conditioner coil temperature is too low and the unit has turned off automatically. The unit resets itself when the temperature reaches 46.4°F (8°C).

Understanding your air conditioner's automatic protection

Anti-freezing protection - When the ambient temperature is very low under Cooling mode or Dry mode the compressor and motor will stop working for about seven minutes if the coil temperature is below 0°C/32°F. When the coil temperature increases to above 0°C/32°F, the protection turns off and the previous mode resumes. When anti-freezing protection is active, E4 appears on the display.

Water-full protection - When the water level in the bottom water pan exceeds the warning level, the unit will alert automatically, "FL" and "Water Full" will flashes on the display. Turn off the air conditioner and drain the water as described in "Emptying the water collection tank" on page 27. After you have drained the water, restart your air conditioner.

Compressor delay protection - Except for the first power-on, the compressor can start instantly. In other cases, the compressor will start after three minutes delay protection.

Cleaning and maintaining your air conditioner

Your air conditioner is designed for year-round use with only minimal cleaning and maintenance

For maximum efficiency, we recommend that you have the cooling coils inspected and cleaned annually. Your local Best Buy Service Center can provide this inspection and cleaning for a nominal fee.

Warning

- Unplug the air conditioner before cleaning or performing any maintenance or service.
- Be careful when cleaning coils or removing or reinstalling the filter. The cooling fins are very sharp.
- Failure to follow the above precautions could result in electric shock or personal injury.

Cleaning the case

- Wipe the case with a slightly damp cloth, then wipe dry with a dry cloth.

Caution

To prevent damage to the finish, do not use:

- Gasoline, benzine, thinner, or other similar solvents.
- Abrasive cleaners.

Never pour water onto or into the air conditioner. It could damage the internal components and create a shock or fire hazard.

Cleaning the air filter

The air filter should be cleaned every two weeks. Depending on indoor air quality, the filter may require cleaning more often. A dirty air filter decreases the airflow and reduces the efficiency of the air conditioner.

Do not operate the air conditioner without the air filter in place.

- 1 Lift the air filter out by the handle.

- 2 Clean the filter with a vacuum cleaner. If the filter is very dirty, it can be washed by hand in warm water with a mild detergent.

Cautions

- Do not use harsh cleaners or very hot water.
- Do not wash in a dishwasher or washing machine.

- 3 Let the filter dry completely, then reinstall it in the air conditioner.

Note

- When the filter is not replaced in the air conditioner correctly, there is a gap between the filter case and the unit.

Emptying the water collection tank

When the internal water collection tank is full, "FL" appears on the LED display and your air conditioner turns off until the tank is emptied.

Notes

- When operating or draining water from your air conditioner, always protect carpeting and floors from possible water spillage.
- When you drain the water from your air conditioner, be sure to wipe up any spilled water with a dry cloth or towel.

- 1 Unplug your air conditioner, then disconnect the exhaust hose from the back.

- 2 Move your air conditioner to a location where a suitable drain is available or place a drain pan under the unit that is capable of holding up to 1.2 pints (0.57 liters) of water.

- 3 Remove the rubber plug from the drain outlet and insert a syphon hose (not included) into the opening.
- 4 Syphon the water from your air conditioner.
- 5 After you have drained the water collection tank, replace the rubber plug, making sure that the bolt is secure.

- 6 Place the air conditioner in the desired location, reconnect the exhaust hose, then plug it in. When the air conditioner is restarted after being drained, it automatically starts in COOL mode with a temperature setting of 72°F.

Storing your air conditioner

If your air conditioner will not be used for an extended period of time, we suggest that you prepare it for storage by doing the following:

- 1 Unplug your air conditioner.
- 2 Remove the rubber plug and drain the water collection tank completely.
- 3 Reinstall the rubber plug.
- 4 Remove the filter case and clean the filter. Allow it to dry completely, then reinstall it.
- 5 Remove the batteries from the remote control.
- 6 Store the air conditioner in a cool, dry place, away from direct sunlight, extreme temperatures, and excessive dust.

Restarting your air conditioner after storage

- 1 Make sure that the filter case and rubber plug are in place.
- 2 Make sure that the power cord and plug are in good condition.
- 3 Install new AAA batteries in the remote control.
- 4 Move the air conditioner to the location where you plan to use it and reconnect the exhaust hose and electrical plug.
- 5 Restart your air conditioner and make sure that everything runs smoothly.
