

LET *WATER WORM* REMOVE WATER FROM THE BOTTOM OF YOUR HOLDING TANKS

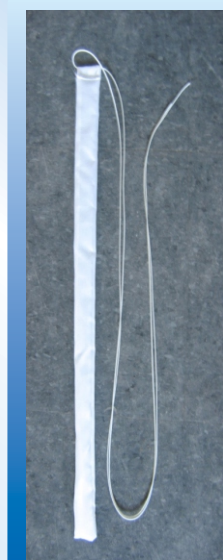

- DESIGNED TO LIE ALONG THE BOTTOM OF ANY FUEL OR OIL STORAGE TANK
- ONLY 1.5 INCHES WIDE TO EASILY FIT DOWN FILL OR VENT PIPES
- ABSORBS ONLY WATER
- ONE WORM CAN ABSORB UP TO 16oz OF WATER

We all know that water likes to collect right at the bottom of a fuel or oil storage tank. This water can corrode the tank to failure and damage the equipment using the tank. The question is, what to do about it? Siphoning cannot get all the water, and can waste some of the stored product as well. We have a better solution, called the H2O Water Worm.

The H2O Water Worm is a 48" x 1.5" cloth tube containing a small amount of our amazing water absorbing desiccant. You simply drop the Water Worm into the tank via any convenient opening, being sure to hold onto the attached 7' cord and secure the cord outside of the tank. After settling to the bottom of the tank, the Water Worm will absorb any water that has collected in the tank, up to 16oz worth.

It is recommended to check every 24 hours within a 72 hour period. To remove the sock, simply use the cord to pull the Water Worm out. If it is full and firm, it's spent; if not, put the Water Worm back in to collect more water.
