## 1-888-PVC-FLEX

flexpvc.com/Reference/WaterFlowBasedOnPipeSize.shtml
"If there be any among us who [disagree], let them stand undisturbed as monuments of the safety with which error of opinion may be tolerated, where reason is left free to combat it." Thomas Jefferson, March 4, 1801

Water Flow Chart \#1 The chart below takes into consideration the potential damage from hydraulic hammer (shock) and noise considerations due to excessive fluid velocity. For more detailed information click here for our pipe selection based on pipe size and flow requirement Nomograph. You can flow more than what is shown in the chart (see Chart \#2 below) however, you may run into problems if you do.
IMPORTANT: The flow ratings in the charts below are for Rigid PVC Pipe. Reduce flow by 3\% (Multiply by .97) for flow going through Flexible PVC Pipe.

|  |  |  | Assume Gravity to Low Pressure. About 6f/s flow velocity, also suction side of pump |  | Assume Average Pressure. (20100PSI) About 12f/s flow velocity |  | Assume "High Pressure" PEAK flow. <br> About 18f/s flow velocity ${ }^{*}$ |  |

## Water Flow Chart \#2

Here is a set of data predicting the amount of flow through an orifice based on pressure on one side of the orifice. Note: This is through an orifice, not a pipe. Adding pipe and fittings will drop this flow significantly. In other words, this would be the theoretical maximum amount of water through a hole based on the pressure above it. The table above is more "real world" information.

| Pressure | Flow in GPM through a hole diameter measured in inches |  |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| PSI | $1^{\prime \prime}$ | $1.25^{\prime \prime}$ | $1.5^{\prime \prime}$ | $22^{\prime \prime}$ | $2.5^{\prime \prime}$ | $3^{\prime \prime}$ | $4 \prime$ | $5^{\prime \prime}$ |
| 20 | 26 | 47 | 76 | 161 | 290 | 468 | 997 | 2895 |
| 30 | 32 | 58 | 94 | 200 | 360 | 582 | 1240 | 3603 |
| 40 | 38 | 68 | 110 | 234 | 421 | 680 | 1449 | 4209 |
| 50 | 43 | 77 | 124 | 264 | 475 | 767 | 1635 | 4748 |
| 60 | 47 | 85 | 137 | 291 | 524 | 846 | 1804 | 5239 |
| 75 | 53 | 95 | 153 | 329 | 591 | 955 | 2035 | 5910 |
| 100 | 62 | 112 | 180 | 384 | 690 | 1115 | 2377 | 6904 |
| 125 | 70 | 126 | 203 | 433 | 779 | 1258 | 2681 | 7788 |
| 150 | 77 | 139 | 224 | 478 | 859 | 1388 | 2958 | 8593 |
| 200 | 90 | 162 | 262 | 558 | 1004 | 1621 | 3455 | 10038 |

## Water Flow Chart \#3

This chart predicts how much flow you will get across a stainless metal ball valve of the diameter \& length specified with a 1PSI pressure drop from one side of the valve assuming about 100psi
on one side of the valve.

| Size (ID, inches) | Length (inches) | Flow (GPM) |
| :--- | :--- | :--- |
| $1 / 2$ | 4.25 | 26 |
| $3 / 4$ | 4.62 | 50 |
| 1 | 5.00 | 94 |
| $1-1 / 2$ | 6.50 | 260 |
| 2 | 7.00 | 480 |
| $2-1 / 2$ | 7.50 | 750 |
| 3 | 8.00 | 1300 |
| 4 | 9.00 | 2300 |
| 6 | 15.50 | 5400 |

Note: The data is for water through the valve only, and does not take into account the rest of the system. It does not give flow velocity, so there is some question as to the applicability of the data. The data comes from a book for industrial piping and probably assumes a massive pump, high flow velocities and metallic pipes. (le, where water hammer and noise are less of a concern than with PVC pipe.) As always, "you mileage may vary."
