INFLATABLE

INFLATABLE

INFLATABLE SPAS INSTALLATION AND USER MANUAL

READ CAREFULLY AND
KEEP IT FOR LATER REFERENCE

www.wavespas.com

IMPORTANT - PLEASE READ

1. Watch our WAVE videos

We know you can't wait to jump into your new Wave hot tub and get started, however before you do that, please check out our set-up videos for an easy step by step guide as to how to get started with your tub safely.

2. Read the manual

Next up, please read the manual! This will save you a lot of time and hassle by explaining the process every step of the way. There is a lot of crucial information in here that will help avoid damage to your spa when setting up and taking down.

3. Choose your site

Get your location right! First off make sure you are setting up your tub in an area where you have enough space surrounding the spa for you to comfortably perform your daily maintenance tasks. Secondly, ensure there is a power outlet nearby as extension cables should NOT be used. Thirdly, choose a site where you can drain the water easily! The site should be flat and completely free from sharp objects. The site where you choose to set up should also be strong enough to take the weight of your spa when it is fully filled and in use. The water capacity for 2-4-person spa is 800L and 4-6 person is 1000L.

The location in which you assemble and fill your spa must be the location you intend to use it, once the spa is full it is strongly advised against that you attempt to move it to another location. Doing so could cause injury to yourself or damage to your tub, which may result in voided warranty.

4. Open the box

Once you have opened the box that contains your new spa you should remove its contents and spread the protective ground sheet on the site where your tub will be assembled. You should then assemble the heater unit and the rest of the tub. Once you are done with the packaging and box you should remove all debris and packaging parts from the tub area to ensure nothing falls in and damages the liner.

5. Inflate the spa

Next step will be to inflate your spa! Connect the motor and heater system and once switched on, the spa can be inflated and ready to fill with water in about 5 minutes. You must NOT over inflate your spa.

6. Clean your spa

After inflating your spa, use a wet sponge or soft cloth to gently wipe the internal surface of your spa liner. Even though your spa is brand new, this is to ensure that any debris or dust that could contaminate the water is fully removed.

7. Filter and filter housing

After gently cleaning the internal liner of your new spa you should ensure that the filter and filter housing are fitted in the correct location (the lower port). Also ensure that the cap is not fitted on the upper port before filling with water.

8. Fill your spa with water

Now you can fill your spa with water! When filling your spa, try to avoid using an old hose as these carry a lot of old bacteria that could contaminate the water. If you are filling your tub using cold water, you should carry on filling until you are mid-way between the min and max filling lines. If you have the ability to fill your spa with hot/warm water this will mean your spa will heat up quicker and be more energy efficient. If you are planning to fill your spa with hot water, please begin using cold water and once you the water has risen above the filter, hot water can then be used.

9. Heat your spa water

Now to heat your spa! To do this you should press the heater button on the left side of your external unit (the sun symbol). A light will then be displayed and remain lit until the water has reached your selected temperature (38°C is the default temperature). Once the desired temperature is reached, the light will flash. Once the LCD display has flashed you will be able to adjust the water temperature using the up and down arrows to increase or decrease the temperature. It is possible for the water to be approximately 1-3°C different to the temperature selected.

The water in your spa heats up approximately 1°C per hour whilst the heater unit is switched on. The indicator on the screen corresponds to the current water temperature. For health and safety reasons the maximum temperature setting on the heater unit is 40°C. You should make sure you have turned on the filtration system before you start heating the water. Put your hot tub cover on to help the water heat up faster and retain heat for longer.

10. Chemical shock

Before you jump into your spa, you should first perform your spa chemical shock. When you set up your hot tub for the first time its always important to add your start up chemicals. You need to perform a hot tub shock to keep the water healthy and prevent foaming or cloudiness. Treating your water prolongs its life such that you will not need to keep draining and cleaning your hot tub after each use. Our Wave starter kit contains everything you need to get your spa up and running!

11. Guide on chemical shock

To chemical shock you should use either warm or cold water and when the water is higher than 25°C mix your chlorine (granules are better for shocking) in a jug with warm water. Put 5 teaspoons of granules into the jug of warm water and add this to the spa after mixing well. Activating the bubble settings whilst doing this will help to disperse the chlorine around the water quicker. After you have chlorinated your spa water, please leave the spa to sit for 24 hours before use. Remember to use your test strips before jumping into the spa as some levels may still need adjusting before use. Make sure alkalinity levels are right after checking the chlorine. pH can be altered as and when required.

12. Maintenance

Regular maintenance of your tub is essential, especially keeping the correct pH levels! The most ideal pH level is between 7.2 to 7.6 and the level should be tested two times a week whilst the tub is filled, and always before use. A heaped teaspoon holds approximately 8g of granules and adding a teaspoon of chlorine everyday will keep your spa water clean and healthy.

13.

Now all that is left is for you to enjoy your new spa! For any further questions please check the FAQ's on our website or contact a dedicated member of our customer service department using the live chat on our website www.wavespas.com.

Carefully read, understand, and follow all information in this user manual before installing and using the swimming pool. These warnings, instructions, and safety guidelines address some common risks of water recreation, but they cannot cover all risks and dangers in all cases. Always use caution, common sense, and good judgment when enjoying any water activity. Please read carefully and keep for future reference.

Non Swimmers safety

1. Continuous, active, and vigilant supervision of weak swimmers and non-swimmers by a competent adult is required at all times (remember that children under five are at the highest risk of drowning)
2. Designate a competent adult to supervise the pool each time it is being used;
3. Weak swimmers or non-swimmers should wear personal protection equipment when using the pool;
4. When the pool is not in use, or unsupervised, remove all toys from the swimming pool and its surrounding area to avoid attracting children to the pool.

Safety devices

1. It is recommended to install a barrier (and secure all doors and windows, where applicable) to prevent unauthorized access to the swimming pool;
2. Barriers, pool covers, pool alarms, or similar safety devices are helpful aids, but they are not substitutes for continuous and competent adult supervision.

Safety equipment

1. It is recommended to keep rescue equipment (e.g. a ring buoy) by the pool;
2. Keep a working phone and a list of emergency phone numbers near the pool.

Safe use of the pool

1. Encourage all users especially children to learn how to swim;
2. Learn Basic Life Support (Cardiopulmonary Resuscitation - CPR) and refresh this knowledge regularly. This can make a life-saving difference in the event of an emergency;
3. Instruct all pool users, including children, what to do in case of an emergency;
4. Never dive into any shallow body of water. This can lead to serious injury or death;
5. Do not use the swimming pool when using alcohol or medication that may impair your ability to safely use the pool;
6. When pool covers are used, remove them completely from the water surface before entering the pool;
7. Protect pool occupants from water related illnesses by keeping the pool water treated and practicing good hygiene. Consult the water treatment guidelines in the user's manual;
8. Store chemicals (e.g. water treatment, cleaning or disinfection products) out of the reach of children.
9. Use the signage as outlined below;
10. Removable ladders shall be placed on horizontal surface.

WARNING: Drained pool outdoors may cause unknown hazards.

WARNING: Installation and assembly shall be done by adults.

WARNING: Read and follow the the instruction for use and maintenance to ensure a safe use of the swimming pool kit. Not following the instructions for use and maintenance can cause serious health hazards, in particular for children.

WARNING: Only for domestic outdoor use.

WARNING: Drowning hazard. Children can drown in very small amounts of water.

WARNING: Empty the pool when not in use. Do not leave a small pool empty outdoor.

WARNING: Keep children under supervision in the aquatic environment.

WARNING: No diving.

READ ALL INSTRUCTIONS AND SAFETY WARNINGS IN THIS MANUAL

Failure to follow the warnings and instructions in this manual may result in serious injury, drowning or electric shock.

The safety of your children is paramount and children must be supervised by an adult at all times. The risk is the highest for children aged below 5. Adults should be on high alert all the time.

Always comply with the following instructions:

- The children should be under close and constant supervision;
- Designate one Adult to be responsible for supervision
- Always designate a responsible person to manage the Spa;
- Adult supervision should always be relevant to the number of people using the spa
- Wet the neck, chest and legs before entering the water;
- Learn the safety warnings and especially in relation to children;
- Prohibit diving and jumping;
- Prohibit running, splashing games around the spa;
- Do not leave any children around and in the spa unattended;
- Always keep the water treatment products out of reach of all children.

If an incident occurs remove the injured person or child from the spa and spa area. Contact emergency services for advice and guidance on how to treat an injured adult or child.

The hot tub's electrical connections must be installed in the electrical safety zones labelled 1, 2 or outside all safety zones. The measured zones are limited by walls and fixed partitions.

For your own safety and that of your product, make sure to following the safety precautions below. Failure to follow the instruction may result in serious injury, property damage or death. Improper installation or operation will void the warranty.

Read, understand and follow all instructions:

DANGER

● Risk of accidental drowning:

- Extreme caution must be exercised to prevent unauthorized access by children.
- Inspect the spa cover regularly for leak, premature wear and tear, damage or signs of deterioration. Never use a worn or damaged cover: it will not provide the level of protection required to prevent unsupervised access to the spa by a child.
- Always lock the spa cover after each use.

● Risk of injury:

If the supply cord is damaged, it must be replaced by the manufacturer, its service agent or similarly qualified persons in order to avoid hazard.

● Risk of Electric Shock:

- Do not permit any electrical appliances, such as a light, telephone, radio or television within 1.5m (5 feet) of a spa tub.
- Do not use the spa when it is raining, thundering or lightning.

WARNING

- To reduce the risk of electric shock, do not use an extension cord, timers, plug adapters or converter plugs to connect the unit to electric supply; provide a properly located outlet.
- The spa electrical appliance should be supplied through a residual current device (RCD) having a rated residual operating current not exceeding 10mA.
- Parts containing live parts, except parts supplied with safety extra-low voltage not exceeding 12V, must be inaccessible to occupants in the spa.
- Parts incorporating electrical components, except remote control devices, must be located or fixed so that they cannot fall into the spa.
- Residential electrical connection box must be located safely with a distance of at least 2m away from the spa.
- Electric installation should fulfill the local requirement or standards.
- This appliance can be used by children aged from 8 years and above and persons with reduced physical, sensory or mental capabilities or lack of experience and knowledge if they have been given supervision or instruction concerning use of the appliance in a safe way and understand the hazards involved. Children shall not play with the appliance. Cleaning and user maintenance shall not be made by children without supervision.
- To reduce the risk or injury, do not permit children to use this product unless they are closely supervised all times.
- To reduce the risk of child drowning, supervise children all times. Attach and lock spa cover after each use.
- Make sure the floor is capable of supporting the expected load ($\geq 500\text{kg/m}^2$).
- To avoid damage do not leave the appliance empty for an extended period.
- To avoid damage to the pump, the spa must never be operated unless the spa is filled with water.
- Immediately leave spa if uncomfortable or sleepy.

To reduce the risk of injury :

- Lower water temperatures are recommended for young children and when spa use exceeds 10 minutes.

In order to avoid the possibility of hyperthermia (heat stress) occurring it is recommended that the average temperature of spa water should not exceed 40°C (104°F).

- Since excessive water temperatures have a high potential for causing fetal damage during the early months of pregnancy, pregnant or possibly pregnant women should limit spa water temperatures to 38°C (100°F).

- Before entering a spa or hot tub the user should measure the water temperature with an accurate thermometer since the tolerance of water temperature regulating devices varies.

- The use of alcohol, drugs or medication before or during spa use may lead to unconsciousness with the possibility or drowning.

- The use of alcohol, drugs, or medication can greatly increase the risk of fatal hyperthermia in spas.

The causes and symptoms of hyperthermia may be described as follows:

Hyperthermia occurs when the internal temperature of the body reaches a level several degrees above the normal body temperature 37°C (98.6°F). The symptoms of hyperthermia include an increase in the internal temperature of the body, dizziness, lethargy, drowsiness, and fainting. The effect of hyperemia include failure to perceive heat; failure to recognize the need to exit spa; unawareness of impending hazard; fetal damage in pregnant women; physical inability to exit the spa; and unconsciousness resulting in the danger of drowning.

- Obese persons or persons with a history of heart disease, low or high blood pressure, circulatory system problem, or diabetes should consult a physician before using a spa.

- Persons using medication should consult a physician before using a spa since some medication may induce drowsiness while other medication may affect heart rate, blood pressure and circulation.

- Check with a doctor before use if pregnant, diabetic, in poor health

- People with an infectious disease should not use a spa or hot tub.

- To avoid injury exercise care when entering or existing the spa or hot tub.

Water temperature in excess of 42°C (108°F) may be dangerous to your health.

- Never use a spa or hot tub alone or allow others to use the spa alone.

- Do not use a spa or hot tub immediately following strenuous exercise.

- Do not put the spa under 0°C (32°F) environment in order to avoid freezing if there is still water in the spa. This will invalidate your warranty.

- Do not turn on the spa when the water is frozen.

- Never pour water with a temperature higher than 40°C(104°F) into the spa directly.

- Always unplug this product from the electrical outlet before removing, cleaning, servicing or making any adjustment to the product.

- Never jump or dive into a spa or any shallow body of water.

- Do not bury the electrical cord. Locate the cord where it will not be damaged by lawn mowers, hedge trimmers and other equipment.

- Do not attempt to plug in or unplug this product while standing in water or when your hands are wet.

- Do not use the spa if damaged in delivery and/or malfunctioning in any way.

- Keep all pets away from the spa to avoid any damage.

- Do not add bath oil or bath salt to the spa water.

- Do not leave an empty spa outside.

- To prevent resetting of the thermal cut out, this appliance must not be supplied through an external switch device, such as a timer, or connected to a circuit that is regularly switched on and off by the utility.

This appliance is marked according to the European directive 2012/19/EU on Waste Electrical and Electronic Equipment (WEEE). This symbol indicates that this appliance may not be treated as household waste. Instead it shall be handed over to the applicable collection point for the recycling of electrical and electronic equipment. Disposal of the appliance shall be carried out in accordance with the local environment regulations for waste disposal.

The CE mark indicates that the product complies with European directives in relation to 2014/35/CE (low voltage), 2014/30/CE (Compliance with the Electromagnetic Compatibility), 2011/65/UE (restriction of the use of certain hazardous substances in electrical and electronic equipment), 2009/125/CE (Ecodesign directive).

2. PACKAGE LIST

2.1. Package list

Ensure to check all parts are present:

Liner

Top Cover

Ground Cloth

RCD

Air Valve

Inflating Hose

Caps

Repair Kit

Filter Cartridge

Filtration Cartridge Support

3.INSTALLATION

WARNING: If the Spa installed on inadequately level surfaces, they are subject to leaking/ forming irregularities or collapsing, which can result in property damage or serious injury for those in or around the spa area!
CAUTION: Please choose your set-up area carefully as lawn and other vegetation underneath the ground cloth (if applicable) will die. Furthermore, try to avoid setting the ground cloth in areas prone to aggressive plant and weed, growth as they may grow through the ground cloth.

3.1. Site selection **WARNING:** Before proceeding to install your spa, please make sure that the selected location meets the following conditions:

- A level place in order to avoid any defect, tearing or leakage.
- Wide enough to support the spa and its pump unit.
- Able to support more than 500 kg/m².
- Sheltered from the sun and bad weather.
- Clean and free from sharp objects.
- Devoid of excessive vegetation on the ground.

Failure to comply with these rules may result in property damage or personal injury.

Use a sun cover

Place in a clean environment

Ensure its level

Disclaimer: Prolonged sun exposure will cause damage to your spa.

WARNING: The RCD plug must be tested before each use...

Do not use if RCD test fails and see chapter 6.1.

1. Insert the plug into the power outlet.

2. Press the «RESET» button, the indicator light turns red.
3. Press the «TEST» button, the indicator light turns off.

4. Press the «RESET» button, the indicator light turns red.

5. The RCD works

3. INSTALLATION

The number of persons required for installation: 1 adult at least
10 minutes for site preparation and water filling

3.3. Assembling

1. Unfold the inflatable spa over the base protector (optional)

2. Connect the inflation hose to the pump on the socket

3. Insert the inflation hose into the spa

4. Connect the pump unit then press the button to inflate the spa.
The air flow valve prevents your spa from over-inflating

5. Inflate the inflatable spa for about 10 minutes. Ensure that the spa is firmly inflated.

6. Remove the inflation hose and screw the cap firmly in place.

7. Put the filter cartridge in the support then screw it onto the lower suction inside the basin.

8. Ensure that the drain caps are properly closed before filling the spa.

10. Smooth wrinkles out of the bottom of the spa then fill the spa to the level indicated. Your spa is ready.

WARNING : Do not leave spa unattended while filling with water.

Make sure the drain fitting is plugged securely and the cap is in place. Start filling the spa with water. After about 1-inch of water is on the bottom, stop filling and smooth wrinkles out of the bottom of the spa. Pull the outer wall out from the top edge, all around the bottom of the spa, so that it fills evenly.
Continue filling until water is level.

4.1. Control panel

4.2. Functions

Once powered-up, the LED displays the current water temperature automatically.

 The temperature unit's selector changes the temperature units from Celsius degrees to Fahrenheit degrees.

Disclaimer: Prolonged sun exposure will cause damage to your spa.

 Press the temperature adjustment buttons, then the screen will flash. When it is flashing, you can set the desired temperature. The value will increase or decrease 1 degree at once. The temperature could be set between 30°C to 42°C (86°F to 108°F).

 To lock or unlock the control panel, press the Lock button and hold 3 seconds. **Lock the control panel when you are away to prevent other people come to change your settings.**

 Press the Bubble button to activate the bubble and massage system, the green indicator light turns on. It can be turned off by pressing it again.

The bubble system will stop automatically after 30 minutes of operation. Re-activate the bubble function by pressing the bubble button again. When the filter button is on, pressing bubble button will alter the filter mode into bubble mode: The filter indicator light will turn off and the bubble indicator light will turn on. If the bubble button is pressed again, the bubble mode will be changed back to the filter mode.

 Press the filter button to activate the water filtration. The green indicator light will turn on when the filtration system is activated. Please note that filters should be changed every 7 days, or until they become discolored.

Note:
- If bubble function is on, the filtration can't be activated.

 Press the heating button to activate water heating and filtering system at the same time. The green indicator light of filter and red indicator light of heating will turn on at same time. The pump does not stop heating until the current water temperature reaches the set temperature; and the heating system will restart after the current water temperature drops 2°C below the set temperature automatically. Maximum heating temperature: 42°C (108°F)

Important:
After 150 cumulative hours of filtration operations, an audible alarm will sound and the LCD display will show the characters CHG, followed by FIL, to remind you to change or clean the filter. You can hold the filtering button 5 seconds to turn off the buzzing. The filtering system will turn off, you can press the button to activate the filtering system again.

Note:
- With the heating system starting, the filtration system will start working together.
- After turning off the heating system, the filtration system will still work.
- If the bubble function is active, the filtration and heating functions cannot be activated.

4.3. Spa cover and security

After each use, the control panel must be locked and the spa must be covered with its top cover and it must be attached to the base protector with the safety buckles.

Each safety buckle has a lock system; To close the buckle, put the latch in an up position which locks the buckle, Put the latch in a down position to unlock the buckle.

The top cover retains the heat from the water and secures the spa.

5. MAINTENANCE

5.1. Water maintenance

WARNING: Bad spa water quality can harm your health.

Depending on the frequency and conditions of use:

- The filter cartridge should be regularly cleaned / replaced every 150 hours max.
- The filter cartridge should be replaced every 150 hours unless cleanable.
- The spa water should be changed every 15 to 30 days.

Use a water test kit to control the parameters of the water before using the spa, or at least once a week.

Use disinfection products for the spa. The treatment products should be used with caution and it is imperative to refer to their instructions.

Damage resulting from improper use of treatment products is not covered by the warranty

1. Water balance

The water balance (pH) must be maintain between 7 and 7.4.

2. Water Sanitation

To sanitise the spa water, we suggest using an active oxygen-based treatment or bromine placed in a floating dispenser. (Dispenser sold separately).

5.2. Cleaning and replacing the filter cartridge

A dirty filter cartridge may contaminate the spa water and cause damage to the heating function.

1. Unscrew the filter case by turning it anti-clockwise. Take out the filter cartridge from the case.
2. Rinse off the filter cartridge with a garden hose. If the filter cartridge remains dirty and discolored, the **filter cartridge should be replaced**.
3. Put back the cleaned filter cartridge into its case and screw it to the spa.

5.2a Disinfection

Water Sanitation:

To sanitise the spa water, we suggest using an active oxygen-based treatment or bromine placed in a floating dispenser. (Dispenser sold separately)

Seek professional advice and guidance before doing this.

Attention:

Detergent residues and dissolved solids from bathing suits and chemicals may build up on the spa walls. Use soap and water to clean the walls and rinse thoroughly with a garden hose using a direct powerful water spray.

5. MAINTENANCE

5.3. Drainage and storage

Drainage

- 1 Check the stopper on the bottom of the spa and the drain cap.
- 2 Unscrew the drain cap.
- 3 Remove the stopper on the bottom of the spa. Completely drain all water from the spa.
- 4 Once empty, the spa can be cleaned with soap and water.

Storage

- 5 Press the bubbling button to blow out the water inside the jet holes. Unplug the pump, remove the filter cartridge from the inner wall of the spa.
- 6 Use a towel to wipe off the spa, dry for 24 hours.
- 7 Unscrew the valves to deflate the spa.
- 8 Fold the spa.

It is recommended to store the spa in its original package in a warm dry place.

5.4. Repair kit

Little holes or punctures can be repaired with the repair kit included and glue can be adhered to the spa liner.

1. Find the leak.
2. Thoroughly clean the area surrounding the leak.
3. Cut a piece of repair material in round shape, which should be larger than the damaged area.
4. Apply adhesive to the back of the patch and around the area to be repaired.
5. Put the patch on the damaged area and press down firmly. Allow 12 hours for repair to dry. After the patch has dried, apply glue around the edges for a complete seal (dry 4 hours). Ensure NO bubbles are left under the patch.

6. TROUBLESHOOTING

6.1 Troubleshooting

Here are some useful tips to help you to diagnose and rectify common sourced of trouble.

Problem	Cause	Solution
Control panel screen does not operate	Check power source	Power failure
		Reset the RCD plus / Check if the wiring system is adapted to the power of the pump unit
		Call for service if it does not reset
SPA pump does not heat properly	Temperature set is too low	Set to a higher temperature
	Filter Cartridge is dirty	Clean or Replace the cartridge (see chapter 5.2.)
	Too low water level	Fill water to minimum water level
	Heating element defective	Call for service
Bubble massage system does not work	Pump is overheating	Cut off power and wait until the pump has cooled.
	Auto shut-down feature (30min) is activated	Press the bubble button to reactivate
	Malfunction of the pump unit	Call for service if it does not reset
Water filtration does not work	Filter cartridge is dirty	Clean or Replace the cartridge (see chapter 5.2.)
	Inlet and outlet blocked	Clean inlet and outlet
	Air inside the pump	Fill water to minimum water level
	Malfunction of the pump unit	Call for service if does not reset
Pump leakage	Adaptor seal improperly	Replace the seal in the right position
	Water leakage from pump body	Check the pump body, call for service
Spa pool leakage	Spa pool is torn or punctured	Use provided repair kit (see chapter 5.4)
Water is not clean	Insufficient filtering time	Increase filtering time
	Filter cartridge is dirty	Clean or Replace the cartridge (see chapter 5.2.)
	Pool filled water quality	Change the pool water completely
	Improper water treatment	Refer to the chemical manufacturer's instructions
CHG FIL	After 150 cumulative hours of filtration operations, an audible alarm will sound and the LCD display will show the characters CHG, followed by FIL, to remind you to change or clean the filter. You can hold the filtering button 5 seconds to turn off the buzzing. The filtering system will turn off, you can press the button to active the filtering system again.	

7. WARRANTY

7.1. Error code

If the screen displays an error code "Ex", please refer to the table below.

Code	Situation	Problems	Causes	Solutions
E1	Not heating Not heating properly	Wrong temperature control sensor.	Temperature control sensor short circuit or open circuit.	Control service center.
E3	Not heating properly	High water temperature indicator.	1. The filled water is over 45°C (113°F) 2. The filter cartridge was put on the wrong suction fitting (higher suction fitting).	1. Cut off the power, make sure the pool water is between 2°C-44°C (36°F-111°F). If this does not solve the problem, refer to the box below. 2. Put the filter cartridge on the lower suction fitting.
E4	All functions do not work, buzzing warn.	Low water temperature indicator.	The pool water is lower than 2°C (36°F)	Cut off the power, make sure the pool water is between 2°C-44°C (36°F-111°F) If this does not solve the problem, refer to the box below.
E5	All functions do not work, buzzing warn.	High water temperature indicator.	The pool water is lower than 50°C (122°F)	Cut off the power, turn to qualified electrician to reset the thermal cutout described in the next paragraph. If this does not solve the problem, refer to the box below.
E6	Not heating and filter - ing properly. Buzzing warns.	Water pressure is not big enough to activate heating.	Inlet or outlet on inner wall are blocked. Filter cartridge is too dirty. Pool water does not reach minimum water level. Do not release air from pump Pump is wrong	Clean inlet and outlet. Clean or replace filter cartridge. Add water to reach water level Do air release as outlined again If this does not solve the problem, refer to the box below

E3, E4, E5, E6 error code

- Cut off electricity for 5 minutes and reconnect

If error code is still displayed on the control Box, please do the following instructions :

1 - Check that the water line is between the high and low limits.

2- Clean or replace the filter cartridge

3 - Unscrew and clean the 2 nozzles (Entry and exit of water) inside the spa and remove wastes if necessary (Neaf, hairs, fur, skin...)

4- Check that the propeller of the filter pump does not contain foreign matter.

Cut the spa again electrically for 5 minutes and re-connect it, if the error code is still displayed on the control box please contact the Service Center

7.2. Warranty

Wave products have been inspected with no evident defects prior to leaving the factory.

Wave warrants this product against defects in material and workmanship for a period of time, 1 year for the pump and 6 months for the liner, unless local law has special requirement.

Warranty for this product begins on the date of purchase and Wave requires presentation of the original proof to purchase to confirm the date. During the warranty period, Wave will either repair or replace, at its discretion, any defective products. Replacement products or repaired parts will be warranted for the unexpired portion of the original warranty.

Shipping cost policy

The return of defect parts to the authorized service centre is at the cost of the owner.

On warranty period, the return is at the cost of service center.

Warranty policy

This limited warranty does not apply to any defect resulting from negligence, accident, misuse, or other reason beyond Wave's control, included but not limited to:

normal wear and tear, negligence or failure to follow the product instructions, improper or inadequate maintenance; connection to improper power supply; chemical water damage, loss of pool water, unauthorized product modification or repair; use for commercial purpose; fire, lightening, flood or other external causes.

This warranty is valid only in the country of purchase in such countries where Wave sells and services the same model with identical technical specifications.

Warranty service outside the country of purchase is limited to the terms and conditions of the corresponding warranty in the country of service. Where the cost of repairs or replacement is not covered by this warranty, Wave will advise the owners and the cost shall be charged to the owner.

This warranty only applies to the original purchaser and terminates upon any transfer of ownership.

All repairs of which warranty claims are made must be pre-authorized by a Wave service centre.

All the authorized selling dealer is responsible for all in-field service work carried out on your Wave product. Wave will not be liable for results of cost of workmanship from unauthorized service person.

Warranty registration

To validate your warranty, please register your product on our website Wave: www.wavespas.com

It is essential that all informations including customer name, date of purchase, serial number, spa model are provided. Without this information the warranty will be invalid.
