

## How to Install Tuf-Tite Septic Tank Risers

## **Things You'll Need**

- Sealant rope (1 roll does 3 risers)
- Robertson Screws
- Hexagon Head Screws
- Risers (3", 6", 12" Heights)
- Riser cover
- Drill
- 1½" Tapcon Concrete Anchors

## Instructions

- 1. Expose septic tank lid. Dig down to tank and clear dirt away from the lid.
- 2. Remove the lid and set it aside. Clear all dirt and debris away from surface of septic tank. Ensure that the septic tank is cleaned thoroughly around the opening.
- 3. Measure the width of the opening on the septic tank.
- 4. Fit the riser to the dimensions of the opening.
- 5. Measure the distance from the top of the septic tank to the top of the surface of the ground.
- 6. Apply the sealant rope to the bottom of the adaptor ring.
- 7. Press the adaptor ring onto the septic tank with the sealant rope on the bottom.
- 8. While applying pressure, drill ¼" holes in adaptor ring and screw in the Tapcon anchors
- 9. Apply the sealant rope to the crevice on the bottom of the riser.
- 10. Place the riser on top of the adaptor ring and secure with Robertson ( $\Box$ ) Screws.
- 11. Continue steps 9 and 10 until you come up to grade.
- 12. Place the lid on the riser and secure with Hexagon head Screws.
- 13. Fill in dirt around the septic tank and riser up to and flush with the top of the riser.

## **Tips & Warnings**

Add an optional safety screen or combination lock if there is a concern for security or safety

Ensure that the riser is completely sealed to the tank.
