Commercial Pressure Switches

Electromechanical Square D Brand 9013

For power circuits, FSG, FTG, FYG, FRG, FHG, and G

Presentation

The PUMPTROL® 9013 Type F Commercial Pressure Switches are UL Listed and CSA Certified as commercial control equipment. Type G pressure switches are UL Listed and CSA Certified as commercial / light industrial control equipment.

The Type FHG - PUMPTROL® Compressor Pressure Switch is used to control electrically driven air compressors and is diaphragm actuated and has contacts that open on rising pressure.

The Type FSG, FYG, FRG - PUMPTROL® Water Pump Pressure Switches are used to control electrically driven water pumps and have the following features:

The Type FSG is the standard water pump switch, suitable for all types of pumps: jets, submersible, reciprocating, etc.

The Type FYG is designed to meet higher horsepower and pressure requirements. The Type FRG is reverse acting: the contacts open on falling pressure. All are diaphragm actuated.

The Type G Commercial/Light Industrial Pressure Switch is used to control electrically driven water pumps and air compressors. It has higher electrical ratings for direct control of motors in pump and compressor applications. The Type G switch is diaphragm actuated and has contacts that open on rising pressure.

Operating Points

Every pressure switch has two operating points; one on rising pressure and one of falling pressure. The operating point on rising pressure is referred to as the TRIP POINT or cut out for pumps and compressors and the operating point on falling pressure is referred to as the RESET POINT or cut in for pumps and compressors. These operating points are called the SETTINGS of the switch.

Differential

The differential is the difference in pressure between the trip point (cut-out) and the reset point (cut-in). It can be adjustable or non-adjustable.
Example: Cut-in (30 psi) / Cut-out (50 psi) Differential equals 20 psi

Range

The range indicates the pressure limits within which the operating points (settings) can be adjusted. The range is referenced to the operating point on rising pressure (trip point). The differential subtracts from the trip point setting.

During the normal operating cycle, system pressure should never exceed the upper limit of the range when using a diaphragm actuated switch. This will greatly reduce the life of the diaphragm.

Maximum Allowable Pressure

Maximum allowable pressure is the pressure to which a switch can be subjected without causing a change in operating characteristics, shift in settings, or damage to the device.

Pressure surges may occur in a system during the start up of a machine or from valve operation. Surges are not normally detrimental to the life of a switch if the surge is within the maximum allowable pressure rating of the switch. Diaphragm actuated switches should not be subjected to more than 10 surges per day. More frequent surges will greatly reduce the life of the diaphragm.

Commercial Pressure Switches

Electromechanical Square D Brand 9013

For power circuits, FSG, FTG, FYG, FRG, FHG, and G

Settings

Pressure switches with adjustable differential (Types FSG, FYG and FRG)

When setting the pressure switch, adjust the switching point on rising pressure first and then the switching point on falling pressure (PB).

Switching point on falling pressure

The switching point on falling pressure is set by adjusting screw-nut **1**.

Switching point on rising pressure

The switching point on rising pressure (PB) is set by adjusting screw-nut **2**.

Pressure switches with non-adjustable differential (Types FTG, and FHG)

Only the switching point on rising pressure is adjustable.

Switching point on rising pressure

The switching point on rising pressure is set by adjusting screw-nut **1**.

Switching point on falling pressure

The switching point on falling pressure (PB) is not adjustable. The difference between the tripping and resetting points of the contact is the differential of the switch (contact differential, friction, etc.).

Pressure switches with adjustable differential (Type G)

When setting the pressure switch, adjust the switching point on rising pressure first and then the switching point on falling pressure (PB).

Switching point on falling pressure

The switching point on falling pressure is set by adjusting screw-nut **1**.

Switching point on rising pressure

The switching point on rising pressure (PB) is set by adjusting screw-nut **2**.

Commercial Pressure Switches

Ordering Information

- 1 Specify Class 9013 Type FSG.
- 2 Select pressure code and add code designation to end of type number. Be sure that pressure code falls within the limits of the device as shown in the device listings.
- 3 If special features are desired, add the appropriate Form letter to the Class and Type. Arrange Form letters in alphabetical sequence when ordering more than one special feature. If no packaging code is indicated, devices will be shipped individually packaged.
- 4 Place packaging code at end of sequence with other forms when ordering.
For standard pack of 20 devices per box C20
Example: 9013FSG2J21MIC20

Pressure Codes

Below is the pressure code table for non-adjustable differential action devices. Existence of a code does not imply that the code is available for any or all devices.

Settings	Code
5-21 PSI	J15
8-20 PSI	J16
20-40 PSI	J20
20-50 PSI	J18
30-50 PSI	J21
40-60 PSI	J24
50-70 PSI	J33
55-85 PSI	J34
60-80 PSI	J25
Specify pressure settings	J99

■ Must be mounted in vertical position to maintain enclosure rating.

Pressure Codes

Below is the pressure code table for non-adjustable differential action devices. Existence of a code does not imply that the code is available for any or all devices.

Settings	Code
20-40 PSI	J20
30-50 PSI	J21
40-20 PSI	J23
40-60 PSI	J24
60-80 PSI	J25
70-90 PSI	J26
70-100 PSI	J28
75-100 PSI	J29
80-100 PSI	J30
90-120 PSI	J31
100-80 PSI	J51
100-125 PSI	J53
110-125 PSI	J54
110-150 PSI	J56
120-150 PSI	J57
125-150 PSI	J58
125-175 PSI	J60
130-175 PSI	J61
140-170 PSI	J66
140-175 PSI	J62
145-175 PSI	J63
150-120 PSI	J64
150-175 PSI	J67
215-250 PSI	J65
Specify pressure setting	J99

- 1 Specify Class 9013 Type G.
- 2 Select pressure code and add code designation to end of type number. Be sure that pressure code falls within the limits of the device as shown in the device listings.
- 3 If special features are desired, add the appropriate Form letter to the Class and Type. Arrange Form letters in alphabetical sequence when ordering more than one special feature.
- 4 Place packaging code at end of sequence with other forms when ordering. If no packaging code is indicated, devices will be shipped individually packaged.
For standard pack of 10 devices per box C10
Available on GHB, GHG, GSB, and GSG

See page 23 for Form C10.

- Must be mounted in vertical position to maintain enclosure rating.
